ArtSage is a small and portable software utility, which enables you to create slideshows from your favorite pictures. It offers support for many image file types, including JPG, GIF, PNG and BMP. Since the tool does not include a setup pack, you can just save the executable to any location on the hard drive and run it directly. There's also the possibility of moving ArtSage to a USB flash disk or similar storage unit, in order to run it on any workstation with minimum effort. What's important to keep in mind is that Windows Registry does not get new entries, and files are not left on the hard disk after removal. At deployment you are required you specify the folder whose images you want to include in the slideshow, as well as make a selection of your favorite photographs. During the slideshow you can open the context menu to make all the necessary adjustments. For instance, you can set a timer, sort items and navigate them, change the viewed location, use a search function, as well as create and manage a favorites list. In addition, you can squeeze, stretch, shrink and rotate images, choose the transitions, switch to full screen mode, set the thumbnail size, and many others. The program uses a minimum quantity of CPU and RAM, has a good response time and works smoothly, without causing the OS to hang, crash or pop up error dialogs. We haven't come across any issues in our tests. Thanks to its intuitive layout, yet rich options, ArtSage should please the entire audience. ARTSAGE is a free Image Cataloging, Presentation, and Slideshow application. ARTSAGE is a simple and easy-to-use utility which allows you to catalog, organize, and display your favorite photos. You can use ARTSAGE to create photo albums, making slideshows, and other similar visual media. With this software, you can get the benefits of cataloging and organizing your collection, and you will be able to enjoy creating slideshows with your favorite pictures. With ARTSAGE you can easily add your photos to an image catalog, including pictures from all kinds of different storage media: the hard disk, image files, memory sticks, and external hard drives. You can easily browse and search your images, as well as organize them in different subfolders. And when the slideshow is completed, you can select a set of photos and then mark them as favorites, which will be displayed within the slideshow. In addition to the main features, ARTSAGE includes the ability to set a custom name for each photo and make an Album. In this way, you will be able to change the name of the original file as desired, being able to use it as album name, for instance. For the slideshow, ARTSAGE features the possibility of making slideshows with the inclusion of pictures from all of the folders where pictures have been saved (or included in the catalog), in a random or ordered sequence. The slideshow can be set to play automatically, or you can decide when to start and finish the display; an option is also provided which allows you to start the slideshow from the end and then move backwards through the photos. For managing the slideshow, you can create and manage favorites lists, decide on the duration and transition sequence of the slide show, and set the thumbnail size. On top of all this, ArtSage also includes the option to adjust the slideshow speed, as well as to open a context menu during the slideshow, in which you can create a favorites list, or create a new subfolder. Our tests showed that ArtSage is a intuitive and well-designed user interface. We were pleasantly surprised by its responsive response time and fast editing speed. On the other hand, the program showed some stability issues, which caused a lock-up from time to time. Also, we found some minor problems regarding the appearance and usability of the program's options, such as the switching between open windows. However, this might have been specific to our

Q: How can I redirect to another page in code behind? I would like to redirect to another page when onclick. Which means I need to use code behind. I am doing it like this in code behind. `protected void ImageButton_Click(object sender, ImageClickEventArgs e) { Response.Redirect("~/pages/myerrorpage.aspx"); }` How can I do it without creating an aspx page in which my button resides. I don't want to use javascript because I would be sending a email to an admin as a confirmation.

A: As long as it's in the same domain, it's simple: `public void ImageButton_Click(object sender, ImageClickEventArgs e) { Response.Redirect("~/pages/myerrorpage.aspx"),`
