Open CASCADE Open CASCADE (formerly known as OpenDraw) is a fully integrated application for 2D and 3D drawing and CAD management. It offers a multitude of drawing objects, including parametric and dynamic meshes, solids, 3D text, rendering styles, and AutoCAD-like editing, such as insertion and deletion of named nodes. Additionally, Open CASCADE includes a scripting language based on Visual LISP (VLISP) which is called DCL (Dynamic CASCADE Language). OpenCASCADE offers many features, including the ability to combine several drawing objects in one drawing, to use extended drawing objects such as text and line styles, to manage drawings from the drawing-to-engineering management and to convert AutoCAD DWG drawings to DGN and DXF format. It also offers extended drawing functions including extents, grids, dimensions, fit constraints, dimensions, fit rules, grid lines, line styles, shadow, animation and full scriptability. The Python-based scripting language is called CASCADE. VRML VRML is an image file format developed in the early 1990s by engineers at Silicon Graphics to standardize the representation of computer graphics in the early 90s. It is an HTML-like file format with tag names and attribute names that are analogous to HTML tag names, and are usually placed between angle brackets (). A VRML file begins with the VRML header, which consists of a four-character string, with the first two characters indicating the language version, and the last two indicating the VRML version. Since the original release, many VRML files were created as a simplified, non-proprietary predecessor to HTML called Tag. The VRML file format is still used by the Web in general. Compared to Hypertext Markup Language, VRML is a lower-level markup language and includes basic features for describing scenes. It is one of the primary formats used for Web pages. The first VRML publication was created by Roy Aguiar and Dick Grune in 1993. They were supported by Silicon Graphics and IBM. X3D The X3D format is a more recent, and open source, XML-based 3D file format. It is used to store three dimensional models. It was released as an open specification by the X3D group, and was approved by the ISO as ISO/IEC 19794-3 in November 2006. This standard is very similar to 5b5f913d15

While President Trump and his administration have offered differing views regarding North Korea, a new study published by the RAND Corporation finds that it would cost the U.S. roughly $7.4 billion to walk back a military attack on the country. "There are many things in this world that are undesirable and costs the United States something, but the preponderance of evidence is that military action against North Korea would be undesirable," said Dr. Christina Kahler, an author on the study. "These costs would include the cost of the war itself, the consequences of actions taken by the United States in the aftermath of the war and the costs of a nuclear North Korea that might arise decades into the future," she continued. Indeed, the costs and human toll of a U.S. attack on the isolated communist regime are vast. RAND study estimates that for every U.S. troop killed or wounded in a North Korean attack, an additional 60 to 110 people in the U.S. would die. The study concluded that in the immediate aftermath of the U.S. military operation, the North Korean regime would find itself in the midst of a "serious humanitarian crisis" as the country suffered shortages of food, water and electricity. U.S. intelligence sources would likely find the regime of North Korean strongman Kim Jong-un to be "on the brink of collapse," as the country's "economic infrastructure and social fabric are highly vulnerable to mass food shortages," the report said. RAND estimated that "within months, the regime would face internal challenges from internal rivals, militia forces loyal to the regime and possibly even the collapse of the regime itself." The cost of such a war, RAND estimates, could be anywhere from $4.7 billion to $7.4 billion. The overwhelming majority of those costs would come from the bill for U.S. troops, according to the study. It found that the attack

Flip User Preferences and Customize the Workspace: User Preferences are like a unique wallpaper that you can instantly apply to your Windows Desktop with a single click. To toggle on or off the flip settings, just click the Windows logo in the lower-right corner. Edit Layout of Bim and 3D Objects 2D and 3D objects can now be moved, resized, and repositioned exactly as with any other drawing object. (video: 2:00 min.) Smart Tool Previews Examine previously drawn objects or design parts that are currently open in a new floating panel. (video: 1:45 min.) Drawing Area Drawing Area automatically corrects your view as you work. Even if you're creating large drawings, you can still work comfortably on smaller monitors. The window is as tall as your drawing. (video: 2:00 min.) Local Drafting Views Switch to alternate views on the fly without switching windows, while staying in the same workspace. (video: 1:25 min.) Save and Load User Preferences On both the Microsoft Windows and Mac operating systems, you can save and load all of your custom drawing preferences at any time. You can even use this feature to backup and restore your drawing settings, or change the drawing defaults. (video: 1:25 min.) Inline Drawing Inline drawing makes it possible to embed comments, lines, annotations, and image files directly into your design. (video: 1:10 min.) Drawing Tips Get expert guidance for your drawings. New drawing tips for several different drawing types are added every month, and you can add your own. (video: 1:15 min.) Double-click to Add Text to a Picture Add text to any open drawing. Just double-click a picture to open the Text Editor. (video: 1:15 min.) Resize Design Elements Resize design elements exactly as you would draw or place them, using the same tools that you use to place or draw objects. Resizing is available for all objects, and automatically scales proportions and snap points. (video: 2:00 min.) New Header and Footer Tools Create a header and footer for every page in your drawing. The header and footer are the first and last objects drawn for
