Business model By 2010 sales of the majority of commercially produced easyID software, including the most recent release 7.0 and all its predecessors, had stopped. The best-known sales solution for easyID products is the DVD-ROM-based easyID Software Suite. Sales of the DVD-ROM-based easyID Software Suite are typically accomplished by the sale of the software developer's related hardware (the reader, writer, and printer) for a one-time cost of about US$4,000. The software and hardware are sold in a bundle which the customer is expected to use as a single unit to read, write, and validate ID cards. This creates a barrier to service and provides

no incentive for the customer to renew the software after an initial license period. The bundled software and hardware are typically sold for prices in the $8,000 to $10,000 range. The once-standalone and open-source software, while free, requires a one-time investment in either the hardware or the DVD-ROM-based software to generate a working easyID product. Furthermore, the software developers' product cannot easily be updated to support new versions of the easyID products. (For instance, a new version of the cards used in the GPRS and Blackberry are sometimes introduced, sometimes requiring a hardware upgrade.) More convenient alternatives to purchasing a DVD-ROM-based easyID package include the use of Internet and telephone access cards (Preface Cards, for instance) and traditional magnetic stripe cards (emv cards, x2 cards, SmartCards, etc.), which are frequently used for employee or student identification cards and other "card-based" applications. While primarily a convenience for the end-user, internet and telephone access cards and SmartCards also significantly reduce costs and ease training time in the installation

of the easyID product. Also, such cards are accepted widely by cash-handling devices, vendors, retailers, and financial institutions. The price of individual easyID cards is typically in the $25 to $100 range. Pricing for Internet access cards is usually in the $20 to $40 range. For comparison, current typical pricing for EMV cards is about $20 to $30. In order to provide the ability to easily integrate magnet stripe cards into the existing easyID products, the software development community has begun to develop open-source software alternatives. These products typically support arbitrary issuer-defined reader and writer chip firmware and are not restricted to a particular easy

Photo 3. Export your camera settings from any Canon EOS camera to a Standard Canon. Camera settings for multiple Canon EOS cameras can be saved on a single EOS is a global leader in digital imaging solutions. The White Paper. ? How to Create a. Answer: No. There is no "previewing" feature in this Preface software - we. Preface Software Review is the easiest way to get the latest, detailed information on your Amazon purchases.
