

This document introduces an XML-based metadata repository that consists of a centralized .6) and more for editing and previewing queries and transformations. Metadata contains information about the files that are stored in the repository, as well as their structure, which allows users to store data about data and objects in the repository. XML-based metadata can be stored in one or more repositories that use certain types of queries. An XML-based metadata repository contains information about the files that are stored in the repository and that can be included in XML-based requests.
