Modern Art Entire floor of the museum is devoted to women artists (though there is a piece by Ana Mendieta made with chicken skeletons); there is a gallery of some of the leading 20th-century sculptors, and an adjoining gallery devoted to installations. The museum houses prints by Edward Hopper, including the famed Nighthawks (1942) which, at the time, was the most profitable print sold by a living artist; by Georgia O'Keeffe, with her famous "Blue Wave" (1931); and by Thomas Eakins, whose Portrait of a Young Woman (1896) is exhibited in the museum's classical gallery. Amongst works from the 20th century, and to coincide with the 100-year anniversary of the Armory Show the museum housed a rotating series of exhibits dedicated to works selected from the New York Armory Show of 1913, including the influential "Democracy" by John Marin. In 2010, the museum opened The Power of the Wok, an exhibition showcasing the role food and agriculture plays in the lives of Asian Americans. Museum boats The one-quarter mile (400 m) long sculling boat, Pier 13 is located at the south end of the museum's waterfront gallery space. It is a replica of the sculling boat that supported the first official exhibition of the 1913 Armory Show. The long gondola boat was designed by William L. Smith in 1904, and built at Hornblower Boats in Marblehead, Massachusetts. Laid down as a gaff-rigged, centerboard-equipped sailing vessel, the boat was purchased by the New York City Department of Parks and Recreation and made into a sculling boat. In 1984, it was towed to Pier 13 and then back to where it was originally built in 1954. The boat is still in good condition and is the oldest vessel kept on permanent display at the Shedd. The other boat on display at the museum is the small, one-masted schooner United States, a replica of the United States. Small boats on display include the lifeboats from the US Navy ship Essex (now preserved at the USS Constitution Museum in Boston) and the ISETAN sculling boat. Pier 13 is the only pier at the museum that allows motorboat access on the Chicago River. A working fender can be used to discourage boat traffic. The museum is in the process of obtaining
