HWID Changer V1.2 [PC]

hwid changer | iphoneiphonemobileapp With the release of the GeForce GTX 1080, the world's most powerful single-GPU graphics card, NVIDIA once again proved that it's the world's most important player in graphics. The latest addition to the GeForce GTX 1080 lineup is the GeForce GTX 1080 Ti. With this card, GeForce GTX 1080 Ti is at the same 1080 Ti price as its predecessor, the GeForce GTX 1080, but with twice the number of CUDA cores and the same amount of memory -- 6 GB GDDR5X. Its power consumption and TDP (Thermal Design Power) has been increased to 300W and 180W respectively. The benchmarks show that the GeForce GTX 1080 Ti has a lot of potential to become the most powerful graphics card on the market. Huge difference in performance between the GeForce GTX 1080 and the GeForce GTX 1080 Ti, especially on games that are known to be optimized for higher end GPUs. Games that are running exceptionally poorly on 1080, but that are playable on 1080 Ti are - GOW2 2.0, DOTA 2 & PUBG. Games that are running extremely well on 1080, such as Metro Redux, Batman: Arkham Origins, The Witcher 3, Wolfenstein 2: The New Colossus, Middle Earth: Shadow of Mordor, and others. Programs that can benefit from higher end GPUs are mostly applications and creative tools.
