----- Hawk Eye is a clean, distraction-free, actionable interface for managing all your GitHub notifications. GitHub provides a large number of notifications from both private and public repositories. This number can grow fast, thanks to the fact that GitHub uses the Webhook notification API. Even though GitHub's built-in notification management system is not too shabby, things can quickly take a turn for the worse when, for instance, you are dealing with tons of incoming notifications, from

---

more than one account. If this is one of your most annoying struggles, then chances are you might just find Hawk Eye to be a life saver. In just a few words, Hawk Eye is a cross-platform and Electron-based piece of software that allows you to thoroughly manage scores of notifications, from multiple accounts, within a distraction-free environment. Extremely straightforward and efficient app Deploying it on your computer is practically a walk in the park since it comes with a hands-off installer that, once launched, takes care of everything on its own, without requiring your intervention. Upon first launching the app, you are prompted to log in using your official

---

GitHub credentials and provide the proper authorizations. Subsequently, you are greeted by the app's stylish and very intuitive user interface. The layout is well thought-out, with a left-sided toolbar that allows you to quickly switch between multiple accounts and a list-like panel that encompasses all the notifications and allows you to neatly filter them by subject, repository, and receiving reason. Uncomplicated and flexible GitHub notification manager Before we go even further, it is worth mentioning Hawk Eye allows you to choose from either the default, black-themed UI theme or another light one, more suitable for bright work environments. In terms

---

of workflow, there's really not much to be said, except the fact that the app allows you to check off single notifications from the list of mark all of them as read. While we are on the subject of customization, we should point out that the application offers you a surprising amount of behavior options. For example, from the Settings section, you can set the update frequency values, and you can ask the app to play all sorts of useful sounds for various actions. What is more, you can change what happens when you double-click the notifications, they can be either opened by your computer's default web browser or simply have their link address copied to the clipboard. If

---

you plan on adding more than one GitHub account

What's New in the?

Take control of your unread GitHub notifications on the go with Hawk Eye. Get notifications from over 100 services, including GitHub, GitHub Enterprise, Microsoft Teams and Slack, and hundreds of apps. Operating out of the box, with just a few clicks, you can manage everything on the fly with this simple, intuitive, and distraction-free app. Centralize all your notifications and choose from two custom UI themes. Preview

---

notifications before opening, and copy links for Firefox, Chrome and other browsers. Optimized for fast and responsive use across desktop and mobile. Features:
