One of Gmail's biggest and most annoying problems has been that of the sudden loss of connectivity to the internet. This resulted in emails being “stuck” on your phone and could render you helpless if you had left a meeting or were on a flight. This application lets you read and manage your emails in offline mode. It simply requires 5Mb of free space on your desktop. Once installed, the application works without internet. However, as soon as the first email arrives, you will hear the system notification, providing you with the opportunity to read the messages and keep them in your cache memory. You can configure the number of messages to be retained for the next day, and also manually put the specific messages you want into the cache. You can also configure the application to automatically delete messages that were either unread or from a specific sender. You can also have the application notify you via an alert sound of the arrival of new messages, and set the time, so as not to interrupt your daily activities or cause you to miss important meetings. Thanks to the integration of Instant Messaging, you can now manage your messages and contacts directly on your desktop, even in offline mode.
