Over this course we will be going through the steps to retrieve all your project files with all their data. As per the requirements of the course we will be using MS project 2010 so you may need to download the update(s) if required. You will learn how to use VS 2010 to create professional looking projects. We will start of with a very simple project called a How To. We will build this project using controls, usercontrols, Xtra-Tables and Dynamic Data. We will then use visual designer to create a simple form that we can use to save and retrieve data. During the early part of the project we will cover the creation of tables and forms in the Project Explorer and use them to data bind to the designer. Part 2 will cover: Setting up the project from scratch. Creating a Grid Control (Tables, Grids, Grids Sorting, Paging, Filters etc.) Creating a User Control (Controls, Grouping, Validation) Creating a Custom Control (Controls, but We Will Do This Bit Later) Enabling Dynamic Data (DataBinding) Adding Bindings, Wiring up the Bindings in the Properties windows Binding Sorting and Filtering Enabling Dynamic Data Binding in Our Table Adding a Data Filtered Column. Adding a Date Column. Creating our How To Project Form. Adding columns. Implementing The Form. Saving our How To. Returning our How To Back Up. Running some Microsoft Project 2000 (old) demos of the project we have just created. This short video is a little exercise/routine. It will teach you about and in a simple way I will show you how I organize the header tags of my websites in this video I have taken 6 websites and organized the header in a way that allows me to scroll through the site once in IE, once in Firefox and once in Chrome. This is short tutorial which is best to use for those of you who are using border-radius, because it will show you how to stylize the corners of a web-page like rounded corner, without actually using the css property Border-Radius. This is a long tutorial that will show you how to use CSS Text Styling in HTML, so that you can use interesting fonts in your websites, and also how

Passcape ISO Burner is an application that can help you create bootable disks from the ISO images stored in your computer. Intuitive wizard to quickly get you through The program boasts a simple interface, and it can be mastered by beginners and experts alike. Thanks to its wizard approach, you are guided throughout the process. No installation is required, and this means you can copy the program on any USB flash drive or other devices, and take it with you whenever you need to reinstall your system. The program provides four main features that can help you create bootable disks, namely you are allowed to burn ISO images to CDs/DVDs, create bootable USB disks, unpack ISO images to disk folders, and to burn ISO images to CDs/DVDs using external CD/DVD burning programs. Several ways to process ISO files Each tool that comes to support the aforementioned modes was especially designed to be handled even by less experienced users. In order to start burning ISO images to CDs/DVDs, you have to select the CD/ DVD recorder and insert a blank disc. Creating a bootable USB disk is particularly easy, as you have to make sure that your USB is connected and has sufficient size to incorporate the ISO image. The data on the selected USB flash drive is going to be automatically deleted, so it is advisable to save the information before continuing with the process. To end with In conclusion, Passcape ISO Burner provides a simple solution for creating bootable disks from the available ISO images. Once you have created the desired bootable disk, you can proceed with the Windows reinstall process and configure PC BIOS settings. Passcape ISO Burner Review: Passcape ISO Burner is a program that can help you create bootable disks from the ISO images stored in your computer.
