What's New In?

I need to create a design that consists of a 50 mile radius (radius can be adjusted) around the Director's house. 1. A graphic of a house indicating that it is the Director's house. 2. Information for the clock at the front door that states the time, and when it is the Director's house open (closes) 3. A keypad or smart phone/tablet that the Director can press in order to get in. I need one entire design (so the web site will function properly). We need a website built for our new salon. We need a beautiful design for it! - The design should be modern and elegant, nothing old fashioned. - Home page should show the salon's logo and the current hairstyle in 3D, so you can view it from all angles and see the different styling elements, like highlights, bangs, etc. - An interactive section with online appointment booking, where customers can register themselves. - A section that allows customers to view the salons previous customers. - A contact section that lists the different contacts with their phone, fax, e-mail and contact details. - A shop section, where customers can view both products and services offered. - A blog section with a short text that shows the latest news and new products. - A contact us section where we can let people know about new products, techniques, courses etc. - A live view option on the homepage, so you can see your beautiful made up hairstyle in real time. - A 4 page site home (not in word format) - A page with all the contact informations and login page. - The site should be CMS based, so it should be easy for us to update and add new pages and texts if needed. - The code of the website should be very clean and organised. - We need a Content manager where we can edit the pages etc. - We want to integrate our social media pages, so customers can see our latest posts and events on Facebook, Twitter, Instagram and LinkedIn. - A new look and feel. - And the best thing: we want our website to be responsive, so the design should fit to all devices! This project is for a web/application that integrates with another third-party system. It must open links within that system from a webpage inside a web browser. For example, if the third-party system has a retailer

System Requirements For Secretary-IT:
