Display memory usage in systray Tuning by portability User-friendly And much more.... The tool will notify you about low RAM usage via a customizable system tray icon. Tune in additional options and details here: Desktop Dashboard is one of the most handy tools for visualizing available RAM and other metrics on Windows. The software includes a lot of useful functions that can extend your system analysis abilities. It is very easy to use the software and it is compatible with Windows 10 and 8/8.1/7. In this post, we'll analyze how to get started with Desktop Dashboard, and how to customize its appearance and functionality. Pros and cons The program has a stable build and is very reliable. The system tray icon is displayed in the system tray and it can be assigned to auto-update by right-clicking it. It is possible to add a small clock as well, which allows you to monitor system information in real-time. The layout is very intuitive and easy to learn. You can quickly set it up according to your needs and start analyzing the indicators through the application's intuitive user interface. However, there are some drawbacks to keep in mind when using this program. The website is not directly available to most users, and in order to download the application, you need to register. The interface lacks some advanced features that you might want to have on your desktop. There are different toolbar buttons, and only a few are compatible with the available ones. All these constraints must be noted before using the program and should not affect your decision to use Desktop Dashboard in the end. Desktop Dashboard installation The software is compatible with all operating systems, including Windows 10, 8/8.1/7, 32-bit and 64-bit, and it also supports all modern browsers. It can be installed through different methods as mentioned above. In order to obtain the complete experience with the application, it is recommended to get the.exe file, which will be offered in the download section below. The application takes a bit of time to install and start working once you run it for the first time, but once it's up and running, it does not interrupt your system at any point. This will keep the system free of unexpected system applications that might be causing problems. How to use Desktop Dashboard Desktop Dashboard can be used in one way or another. Since it is not necessary to work
