ENGLISH-IOPF-NPF.7z. Q:

Using strtotime with a time
string - yyyy-mm-dd hh:mm:ss
I'm trying to validate an input
string - but i'm not exactly sure
how to best validate a date. The
string i have in mind is as
follows - 2010-02-20 09:13:57

What i'm doing is I'm passing
this string to strtotime - and i'm
trying to get the unix timestamp

of the above string to a variable. Is this the right way of going about it? Will it always give you the unix timestamp for the above string? A: If what you want is simple, yes, but if you want anything more, don't do that. Use DateTime: \$dt = new DateTime('2010-02-20 09:13:57'); echo \$dt->getTimestamp(); // 1447870177 And then convert into what you want to use, if

you want unix time in seconds,
use: \$unix_time =
\$dt->getTimestamp() / 1000; If
you want it in whatever units
you want, you can always use it
after: \$unix_time =
\$dt->getTimestamp() / 1000;
\$seconds = (int) (\$unix_time %
60); \$minutes = (int)
(\$unix_time / 60 % 60); \$hours
= (int) (\$unix_time / (60*60));
