Virtual Migration Environment (VME) provides pre-defined virtual machine images that allow customers to migrate from Project Server 2003 or Project Server 2007 to Project Server 2010 and SharePoint 2010 without having to install Microsoft Office Project Server 2010 or SharePoint 2010 on their physical servers. These pre-defined virtual machine images also provide a reference for customers, partners, and Microsoft to migrate to Project Server 2010 and SharePoint 2010 by performing the following actions: Installing the following Office Server 2010 products on a Windows Server virtual machine: Virtual machine image: Microsoft Project 2010 for Microsoft Project Server 2010 Virtual machine image: Microsoft Office SharePoint Server 2010 for Office SharePoint Server 2010 Installing the following Office Server 2007 products on a Windows Server virtual machine: Virtual machine image: Microsoft Project 2007 for Microsoft Project Server 2007 Virtual machine image: Microsoft Office SharePoint Server 2007 Installation of custom objects: Customize your virtual machines to install the Customize component to replicate the deployment of the Office Servers on your physical servers. Installation of sample content: Install additional content such as content that was in use at your organization. Pre-plan your environment Prior to migrating an environment from 2003 to 2010, customers must plan and prepare for the migration. The Virtual Migration Environment includes pre-defined virtual machine images that provide customers with a reference to plan and prepare for the migration. You can configure the virtual machines that provide the environments in the Virtual Migration Environment by following the Microsoft documentation that includes the following topics: Configuring a project server 2003 environment for virtual migration; Configuring a sharepoint server 2003 environment for virtual migration; Enabling and planning your environment; and Migrating your configuration. Use migration tools With Virtual Migration Environment, you can create your own virtual machines or import the VME virtual machines into a virtual machine that you have or use a third-party provider to create virtual machines based on the VME virtual machine image. You can customize your virtual machines to configure unique deployments. You can import the virtual machines into your own virtual machine and customize it for the environment. You can also import the virtual machines into virtual machines that you obtained from a third-party provider. This guidance provides an example of how to use the Virtual Migration Environment to import a virtual machine that has been defined with Microsoft Project 2010, SharePoint 2010, and custom objects and other customizations. New Virtual Machines for the Oracle Database (Oracle VM) are designed to help you run the Oracle Database on a Windows Server virtual machine (VM) rather than on a physical computer. You can use Oracle VM with a variety of Oracle Database configurations and features, including the Oracle Database 11g and 12c release media available on the Virtualization Marketplace. Learn more about Oracle VM. The Virtual Machine Environment (VMware Tools for Oracle Database Server) is a set of tools and resources that are used to deploy and run the Oracle Database Server virtual machine (VM). The Oracle VM is configured to run Oracle Database in the virtual machine. In addition to the Oracle Database virtual machine configuration and an administrative log, the Oracle VM will run the tools and resources to install the virtual machine and launch the operating system. The Virtual Machine Environment includes the following: In addition to the Oracle Database virtual machine configuration and an administrative log, the Oracle VM will run the tools and resources to install the virtual machine and launch the operating system. The Virtual Machine Environment enables you to copy the Oracle Database Server virtual machine configuration file. The Oracle VM will install the operating system. After the Oracle VM is installed, the following Oracle VM configuration file is copied: Oracle VM Configuration File (ORCLVM1.VOICE) The Oracle VM Configuration File is a configuration file that includes information about the installed Oracle VM. The configuration file is located in the Oracle VM directory in the Virtual Machine Environment: Oracle VM Configuration File (ORCLVM1.VOICE) The Virtual Machine Environment will start the Oracle VM and provide the administrator with the ability to start the administrative log and shut down the operating system when the Oracle VM is not being used. Create Microsoft Azure Compute Services in the Virtual Environment It is now possible to manually create Microsoft Azure Compute Services on a Virtual Environment. Previously, the Azure Compute Services were automatically created within the Virtual Environment configuration when the Virtual Environment was provisioned from a Virtual Machine template. The Azure Compute Services is a resource created by a user, which can be used to run Microsoft Azure specific workloads. The following shows how to provision the Azure Compute Services using the New-AzureVirtualMachineService cmdlet. Note: If the Azure Compute Services are already created and there is no additional Azure Service that is created, you will be given the opportunity to use the existing Azure Compute Services. Otherwise, the cmd
