Free System Cleaner Crack+ Free Download

Free System Cleaner is an application that frees up your space and improves the performance of your computer. It allows you to delete files that are not needed any more. The program not only deletes registry entries but also scans your drives and finds unnecessary files that are not needed any more. These files are automatically moved to a special area and then finally deleted. The program itself does not harm the registry and your system's structure. System Cleaner will scan your hard drive and delete files that are not needed any more. It supports Windows 8, 7, Vista, XP, 2000 and Mac OS X. System Cleaner can be used without any problems even on an online computer and on the go. The program can be used to clean your files without having to log into your computer and without interrupting your other programs. System Cleaner supports numerous tasks that can be done without any problems. You can clean the temporary files, delete the history of your Internet activities, hide the program or customize the appearance of the program. You can also use the program to clean the temporary files of other applications and keep track of your downloads. Besides the cleaning function, System Cleaner allows you to uninstall and reinstall applications. You can also uninstall programs that are not needed any more and repair applications that are damaged or corrupted. You can also check out the details of your applications. System Cleaner allows you to view all information about your computer and its components. It displays all the components of your system, their names, versions and the updated date. Furthermore, it displays the hard disk drive, CD/DVD and floppy drive. You can also set the time interval between each run. System Cleaner allows you to remove annoying advertisements from the Internet. You can easily enable or disable the advertisements that run on your computer. You can also remove and clean the browser's cookies, block third-party cookies and remove the homepage of your browser. System Cleaner can also be used to change the time of your computer and display the system information. You can also set the computer to go to sleep when it's not being used and wake it up when you are using it. You can also enable or disable the automatic update of your software. Why you need it: System Cleaner allows you to easily customize the program. It allows you to delete the program's history, customize the program's appearance, clean the temporary files, hide the program and customise its appearance. You can use your own scans and choose any date for deleting the obsolete files. PC Genius Free System Cleaner 2.2.0.

What's New In Free System Cleaner?

Before the first use, make sure you have the Free system cleaner installed. The application performs a quick scan and categorizes files according to their importance, saving them in order to provide you with a complete overview of what's taking up your disk space. The program also makes it easy for you to remove unneeded files and has a friendly user interface. After the scanning is over, you can use the on-screen or the integrated utility to quickly view and remove from your computer files that are taking up space but are still present on your hard disk. Files are found by their size or by their content, and by default the whole registry is scanned. In addition, you can select a specific folder to be scanned as well as optionally only unimportant files. System Requirements: Minimum Windows XP (SP2 or later) Recommended Windows Vista or later Storage: 2 GB free space on your hard disk Additional Notes: If you wish, you can transfer the created report to a PC that is linked to the Internet and share the results with your friends and family. Files Remove from your PC Remove from your PC Remove from your PC Remove from your PC Clean Up Space & Boost Performance Overview You can remove all the files that are taking up space on your hard disk, you can delete every file that has an extension that is not.exe, or you can delete files that are no longer necessary. Cleaning up the disk space frees up valuable hard disk space, reduces the size of programs that are currently installed on your computer, and improves its speed and performance. Removes only unimportant files Removes only unimportant files Removes only unimportant files Removes only unimportant files Find, List & Clean Files Overview Before you start using the System Cleaner, you should make sure you have removed any temporary files that are no longer required. Some temporary files are generated by programs that you are using, some are created by the system, and some are created by extensions that are not needed. For example, the Windows Save As dialog box contains temporary files that are used to complete the action you are performing. To find out whether a file is temporary or not, open the Windows File Explorer and select the Search option. Enter *temp*, the folder where temporary files are located, in the File Name field. When you find a file that you suspect to be temporary, right-click on it and select Delete. Choose the content of each of the above-mentioned folders Choose the content of each of the above-mentioned folders Choose the content of each of the above-mentioned folders Choose the content of each of the above-mentioned folders
