

Percentage Calculator Crack + Keygen

Percentage Calculator is a simple and efficient Windows calculator to calculate the percentage of passing in your exams and grades. It is very simple to use and can be used for several calculations. By default it only allows you to calculate the percentage of passing with a criterion of 33% and 40% (you may change this in the 'Passing Criteria' section). Your input must consist of a total of your marks, such as 100 marks. The marks you input must be expressed as whole numbers. You may also select your marks using a summary of all marks, for example if you want to calculate the percentage of passing from 50 to 100. The pass/fail result can be specified in the 'OutOff/Max' section, this can be 0 to 9999 for a single grade or 0 to 99999 for all grades. For each input, the result displayed in the window is automatically updated. You can reset the percentage at any time by pressing the 'Reset' button. Percentage Calculator is a user-friendly piece of software designed to assist you in calculating the pass/fail rate in your courses and exams. The application is very basic and only offers one main function, that of calculating the fail / pass rate using the marks you input and the 'Passing Criteria'. While it can be of use to many people, Percentage Calculator is so limited in what it can do, that it is hard to think it will become a popular application, particularly when compared to similar calculating tools. In order to obtain a result in percentage, you need to enter your grades, either in as a single item or a summation of all relevant grades in the 'Your Marks' field. In the 'OutOff / Max' section, you have to enter the maximum result possible for that particular exam or course, such as 10, 100 points or 500 marks. Before calculating your result, you also need to select the 'Passing Criteria', meaning how little can your grades be and still not fail in an exam. The default settings are '33%
