Models for two-wave data are considered in Section 9.1.. K.G. Jöreskog et al., Multivariate Analysis with LISREL, Springer Series in Statistics,. In addition,. PROC GLM allows only one model and fits the full model. See Chapter 3, "Introduction to Analysis-of-Variance Procedures," and Chapter 32,. In chapter 3, "Introduction to Analysis-of-Variance Procedures," Wagner . FRANCISCO. Z. VARELA. Chapter 5, "Introducing LISREL". The difference is that when SEM analysis involves multiple-equation estimation, the model indices are not as easily interpreted, and the results are not as unambiguous. This chapter of the book is devoted to the topic of multiple-equation structural equation modeling (SEM) with general covariance. A key feature of it is that it treats both the computational procedures and the interpretation of model indices from a point of view that is analogous to a regular principal component analysis (PCA). The chapter serves both as a computer-based introduction to multiple-equation modeling and as a simple introduction to the graphical interpretation of model indices..
