It is based on the idea that every backup should be scheduled, so you don't have to think about it every time you want to back up a new or different folder. Tree Backup is a GUI tool, and supports both the GNOME and KDE desktops. It works by collecting a list of folders and moves them to an archive folder. It is also possible to schedule backups, based on the folder's modification date or age. Installation is straightforward: you can use the bundled.deb package, or run the.deb installer and select your desktop environment. The interface is clean and modern, with quite a few available options. It has icons that make it possible to access commonly used options without much effort. In the Backup section, you can schedule your backups, perform incremental and full backups, and select folders to be included in the backup. In the Settings section, there are many options: the interval between backups, scheduling options, the logfile, etc. The Settings dialog is quite large, so it's possible to find what you need in just a few minutes.
