But in recent years, it has also become available for mobile and web apps. You can use these apps on an iPhone, iPad, or Android device. While the mobile apps have their own shortcomings, they are useful for on-the-go presentations and small-to-medium-sized projects. However, the real advantages of the mobile app are that you can draw, modify, and edit the designs in your mobile devices. With the help of your smartphone or tablet, you can write notes, make sketches, draw images, measure distances, measure angles, and do many other things in a more convenient way. Using your mobile device to edit drawings takes out the hassle of writing on paper, which is useful when working on large projects. Additionally, this eliminates the hassle of taking your laptop everywhere you go, thus giving you the freedom to work on drawings anywhere and anytime. While some CAD programs have been integrated with touch technology for some time now, using AutoCAD on a touchscreen could be more convenient and time-saving.
