Check out the online, printable Lesson 24 to find out about using the Free Transform tool. Seeing the big picture The image on the left is a printed print of a picture in my possession that I have altered to emphasize the part that's important to me. The original picture, the background, and my face are all in color. The image on the right is an enlargement that I made from an earlier edited version. I extended the original photo beyond the area I wanted to show to bring some of the feel of film to the photograph. The background is completely black and white. In this section, I show you how to adjust the contrast and brightness in an image, and I explain how to use curves to control the shape of the tonal range. Figuring out tonal range A tonal range is the tonal range of an image from black to white — or every shade of gray in between. Because tonal range describes the shape of the image's tonal values, a person on a monitor can often see the tonal range before he can see the tonal values themselves. But a person viewing a print has no choice but to see and judge the actual tonal values of the image. Figure 16-1 shows you what you're looking at — that is, the image shown on the left is a printed photograph in color, while the image on the right is an enlargement of the same image. **Figure 16-1:** An enlargement can show the full tonal range of a photograph. Readers, you get paid to read words, so read this sentence four times. Now I'm going to give you a label. Here it is: "Read this sentence aloud four times." Got it? Good, now try to look at a real picture of a real set of images. The first thing you're looking for in this kind of situation is the tonal range. In a printed photograph (as shown in Figure 16-1, left) it's quite obvious, and it's easy to look at the photo as a whole and find the first darkest tone (the tonal values of black in an image) and the last lightest tone (the tonal values of white). This is the tonal range of the image. The second thing you're looking for in a printed photograph is the color values. You can't really look at a photograph as a whole and find the color

Sanctuary of St. Thomas, Madrid The Sanctuary of St. Thomas is a Roman Catholic church located in Madrid, Spain. It was founded in 1991 and it is named in honor of St. Thomas Aquinas. Its design has been inspired by the church of San Pedro in Lavacolla, and has a concrete structure. The exterior and the interior The exterior, in view of the prevailing flow, adopts a series of rectilinear bodies with a clear line. The choice of rectilinear bodies is based on a critique of Modern architecture, with its protruding and voluminous elements. Instead, a rectilinear form is used to give prominence to the interior of the church. The church has a flat roof: a row of white vertical panels dominates the front. The church is surrounded by a rectangular oval wall of 12 m height. The small church is divided into three naves. The main one, with height of 6.8 m is entirely comprised of panels with a range of 50 cm to 1 m. A portico extends from the main facade to the side facade. The side facade consists of three 12 m high concrete walls and frames the inner nave. Inside, the walls are painted in two tones: dark blue and cream. The floors are made of tiles from Salamanca, white and in shades of green. The staircase inside the church leads to an upper gallery with a length of 12 m and width of 5.1 m. The ceiling is entirely covered in glass which opens the building and allows light to enter, offering a particularly refreshing effect. The interior also has panels, which are divided into two tones: blue and beige. A panel of ivory inlaid with four figures on the left side of the main nave represents the Crucifixion, with a series of figures of saints on the walls: St. Thomas and St. Mary Magdalene on the left; St. John and St. Paul on the right; St. John the Evangelist on the western wall, and St. Agatha on the eastern wall. Furniture As in other ways, the Sanctuary of St. Thomas manifests the merging of construction and symbolism, as the light, and even the sense of pain and suffering, is represented by the use of transparent panes in the portico, and the visible ceiling in the main nave. The walls and ceiling of the church are

The latest installment in Ridley Scott's Alien saga, Prometheus, to hit theaters this weekend, boasts some...big ideas. Inspired by the first Alien movie, and prequel to the 1979 classic ALIEN, Prometheus is the prequel to a prequel. Gee whiz. Where the Alien franchise really takes off, we now know, is in its treatment of the subterranean

horrors buried deep beneath our feet: The area where the crazed Xenomorph lurks, ready to burst forth. A gigantic subterranean space crawler with teeth and guns is kind of frightening, even in a horror movie – we can handle that. But let's not forget the human characters and their inner motivations that drive the plot of the series, and those motivations are very black-and-white, so one might say that they're a bit terrifying. I ask you this: who do you root for? Who do you want to survive? Is it the Space Jockey (Sliding down into the depths of the planet's atmosphere to deliver his bi-i-lliotron beam weapon to the population on the surface, and whoopee-doodle-doo, kill anyone he finds)? Or is it the scientist who attempts to save her people from the beast – despite her true feelings for the same Space Jockey, who she fought for his honor? The “Bad guy” has always been the prey of the predator, whether human or alien. Sometimes the creature is just trying to get by, but more often than not he's been dehumanized in the process. The Alien series is about the (v)human. When we fear the creature, it's not because it's so much more powerful. We fear it because it's an abomination against nature – against us. We don't understand it, and we're afraid that we will someday. How does Prometheus take those fundamental concepts and apply them to a new frontier? Sounds like a cool idea, right? It is – but, I've got to ask: will this new story be so much more “Ridley-Scott-crazy” that it stops being a “prequel” and starts being a “pagan” unto itself? How twisted and how “ahead-of-its-time” of
