If I have a UIScrollView with a UITableView, I want the underlying

UITableView to be transparent, while still displaying the content of the scroll view. Is this possible? A: Yes, of course. You'll probably want to use an opaque UIImageView as the subview of the scroll view, but give it no background color. Then, position the table view offscreen, so it isn't showing, and use the scroll view's - (void)setContentOffset:(CGPoint)contentOffset method to scroll it where you want it.
