The first AutoCAD model was not a true CAD model. It was a line-based drawing using linear dimensions as the basis for the shapes and features. In time, however, many CAD models used features in addition to dimensions. Prior to the release of AutoCAD 2000, most AutoCAD users were practicing traditional drafting workflows. Before AutoCAD 2000, they would normally draw a sketch, prepare drafting tables, create a drawing layout, trace the components, add annotations, place scale drawings, add dimensions, insert legends, print paper drawings, plot scales, and send the drawings to a printer. AutoCAD reduced drafting time, eliminated the need for drafting tables, and reduced the need for pen-and-ink sketching. AutoCAD eliminated the step of creating a layout, instead providing tools for snapping (aligning) the layout to the drawing (or model) and for placing dimensioning symbols in the layout. AutoCAD 2002 includes the following significant new features: 3D drawing capability - 3D models can be created and used with AutoCAD 2002. Drawing can be created using 3D drawing tools. AutoCAD also can be used to create and edit 3D models. (See 3D modeling in the AutoCAD Reference Guide.) Internet - AutoCAD can be used to communicate with others and with the world. AutoCAD 2002 supports communication through email and through web pages or web services. AutoCAD 2002 also supports collaboration through online communities. Dimensional editing - In AutoCAD 2002, the graphical interface is easier to use and is based on the traditional, pen-and-ink dimensioning technique. Other dimensions in AutoCAD 2002 have a graphical appearance similar to other, more complex, AutoCAD features. For example, AutoCAD can be used to create dimensions with various graphical effects and settings. (See Advanced features in the AutoCAD Reference Guide.) AutoLISP - AutoCAD 2002 includes the AutoLISP language to add macros (functions) to AutoCAD drawing commands. Many of the macros, such as commands that delete entities or change their visibility, can be run from the Insert menu, similar to the way macros are run in other applications. Plotting - AutoCAD 2002 provides tools to plot and compare 2D drawings. It also can be used to plot 2D drawings and to produce topographic maps, basic floor

All dates are in format: yyyy-mm-dd. I need to replace some rows with a replacement text. My code so far is: "; } mysql_close(\$con); ?> I need to replace dates in the table with a new value that will be a text. This means that if I want to replace in a row the date: 2010-03-01 I have to replace with: Set date value to: 2010-03-01. How can I do that? A: You can use STR_TO_DATE() function, in combination with REPLACE() and CASE expression. This example changes the values in the database from a value given by the user to another one, so your inputs look like: Date input from user: 2010-03-01 New value for the column: 2010-03-01 Query: SELECT CASE WHEN REPLACE(STR_TO_DATE(date, '%Y-%m-%d'), '2010-03-01', '2010-03-01') = '2010-03-01' THEN REPLACE(STR_TO_DATE(date, '%Y-%m-%d'), '2010-03-01', 'My new value') 5b5f913d15

Q: Is the extra energy by using.htaccess file? I am new to web development. I have a directory called tools and in that directory I have 3 files: 1..htaccess file, 2. index.php 3. contact.php I have a php file in a new directory called contact. How can I redirect the users to the contact.php file? I have read a lot of articles where I found that it is possible to create some.htaccess file, and redirect the users to another file. Now I wonder if using.htaccess file is really necessary? Can I not use the.htaccess file and create the redirects manually with php? I mean, is the extra energy in using.htaccess really needed or it is something optional. I mean, I have seen many many articles where authors use.htaccess file and most of them say it is mandatory. I have seen many articles where authors do not use.htaccess file and still they write the rules for redirects. Can you please let me know? Thank you. A: Using.htaccess is necessary if you want to restrict access to files and directories. In addition, using.htaccess will allow you to add additional rewriting rules. Rewrite rules allow you to do things like: RewriteRule ^(.*)\$ \$1.php [L] This would tell Apache to go to a file called \$1.php, but only if the request is coming from the URL /mypath/myfilename. If you don't use.htaccess then Apache will just pass the request on to PHP. This is normally not what you want, as PHP will handle.htaccess rules before it processes the rest of your application. If you have.htaccess rules that you don't want PHP to process then you should put them in a separate file (such as.htaccess), and include that file in your Apache configuration (i.e. in the same file as , then should look like this: AllowOverride All Order allow,deny Allow from all But if you use.htaccess then you won't have to do anything extra in Apache. /#

What's New In AutoCAD?

Use the new Markup Assistant to quickly and accurately incorporate digital images or sketches into your drawings. Add, modify, delete, and save digital objects such as images,.GIFs,.JPGs,.PNGs, and.TIFFs right in your design. (video: 3:00 min.) Change to the new Precision Drafting Geometry Mode and experience a huge boost in productivity. Draw with the intuitive precision of physical geometry, and complete your designs more easily with stronger, more precise measurements and layouts. (video: 1:30 min.) New Proximity Editing Options: Apply geometry and dimension editing rules to specific segments of your drawings. Add a style to a column or align lines across a whole drawing. You can apply custom rules, as well as geometry and dimension rules. (video: 1:25 min.) Spatially edit linked drawings in proximity mode, with any setting, any layer, and any coordinate system. Rely on the exact coordinates of linked drawings when editing geometry and dimensioning. (video: 1:25 min.) Simplify drawing tasks with new graphically-based commands. Customize the output of your commands to create a desired end result. You can now duplicate geometries, object styles, and dimension styles directly from the command line. (video: 1:40 min.) Make it easy to draw diagrams and organization charts. Create a new organization, and wireframe and dimension your organization using new commands. You can use the original state of your layouts to bring back the hierarchy later. (video: 1:50 min.) New Rasterization Options: Rasterize your drawings to increase performance. Rasterize your drawings for multiple CPUs, so that you can use multi-processor computers to speed up your work. You can rasterize components of your drawings as separate images. (video: 1:25 min.) Automatically convert a fixed-point or text system to an image-based coordinate system. Easily convert the relative position of your drawings to be independent of the origin of the drawing. (video: 1:25 min.) Use a new optional rasterization checkbox to force the rasterization of your drawing. Use this option to analyze drawings for efficient rasterization. (video: 1:20 min.) Use new profile settings to control the rasterization
