2D In addition to vector graphics, AutoCAD supports bitmap graphics, or raster graphics. 2D is similar to 3D, but the geometric coordinates are two dimensional, instead of three dimensional. In 2D, the Z-axis (or thickness) is not used. The 2D drawing area is divided into views that are arranged in a matrix, called a workspace. The views can be moved, rotated, scaled, and turned on and off. An object such as a block or line is represented by a vertex array. These can be drawn to an entire view, but in many cases it is necessary to only display a portion of it. In 2D the vertex is used to represent the geometric center of the object, but in 3D it is necessary to use a 3D vertex. The 2D workspace is used for performing measurements and for setting reference points. 3D AutoCAD supports 3D (three-dimensional) drawings. The geometric coordinates are three-dimensional, instead of two-dimensional. The Z-axis (or thickness) is used for 2D, and there is no limit on the number of dimensions. A single drawing consists of one or more blocks (a subset of objects). In addition to blocks, AutoCAD supports some other types of geometric entities: faces, fillets, lines, shells, trims, and splines. The 3D workspace is used to perform these operations. The 3D workspace is used to manipulate objects. Dimensioning and labeling AutoCAD supports dimensioning, which is similar to a spreadsheet, except that each dimension is stored as a separate element. They are used for setting size-related properties of the objects in a drawing. An element can be represented as a number, a text string, or a combination of both. For example, it can be represented as 5 mm. It can have a text label attached to it. In this case, the text string is part of the number. If it is not, then the text string will not be displayed in the drawing. The dimension is used to set a property, or a property value, of

an object. A dimension is usually applied to a face of an object. For example, if an object has five faces, then there would be five dimensions. The number of dimensions can be set in an object or on a template. The dimensions can be aligned, ca3bfb1094

Recent Articles EBay has axed a third of its sales staff and is cutting around half of its research and development staff. "We've made the difficult decisions to focus our sales and support teams on the remaining volume of customers that best match our longer-term strategy," said an eBay spokeswoman. The total number of staff will be reduced by 20 per cent, though the reduction will be more of a reallocation. Meanwhile, the company will cut as much as 50 per cent of its R&D staff from around 800 to 200, according to an Australian Financial Review report. EBay bought Auctomatic, the company behind search engines for niche marketplaces, last year, but has yet to give Auctomatic any concrete directions. It might be that the company is trying to match the combined properties of B2C and B2B marketplaces, or keep both B2C and B2B separate. It might also be that it is preparing for the next wave of the downturn, or preparing to compete against Amazon. Whatever the case, the sales staff reduction and R&D cuts are the first of many to come. A further reduction is likely in the near future, a company insider says. EBay expects to cut \$1.6 billion in costs in the year to the end of May.

No manual for the kitchen: IKEA's high-tech Android tablet IKEA has released a high-tech Android tablet for your kitchen that will connect to your home network to control appliances and TV. The \$399 tablet, called Helle, is IKEA's first hardware venture into the home-kitchen sector. It is also the first IKEA product to incorporate the Android OS. The product aims to combine IKEA's familiar feel, design and functionality with the latest generation of internet technologies. "Helle is a family product that has been developed to connect families in every kind of life situation," IKEA's director of communications, Jesper Brümmer, told Computerworld. "For the home, Helle combines the IKE

As you review your design, quickly and automatically insert scaled 2D drawings into your drawings. Each drawing can have different scales and line widths, and you can review them all simultaneously. Markup Assist simplifies this by importing feedback directly into your drawing, so you can view and review multiple aspects of the design at once.

Pre-drawn Stitches: Easily connect several geometric shapes with pre-drawn stitches. Create stitches with your mouse, and then easily repeat them and move them to other locations. For example, select the start and end points of a pattern and click the Stitch command. Drag the mouse to control the pattern, and repeat the pattern. Creates nodes as you move, and you can position them easily. You can also define how to connect the geometric shapes, such as using corner, middle, and edge options. With the Create Stitches tool, you can also create a pattern in three dimensions.

Tooltips: The tooltip now shows more options and options help you to learn how to use the tool. You can choose from three sizes for the tooltip: Standard, Large, and Extra-Large. The tooltip automatically updates as you add new tools or add the tool's shape as an object to your drawing.

Auto-convert predefined styles: Auto-convert styles, including the Stylize, User, and VE styles, and to automatically convert them into the active shape style. Create a new standard shape and adjust the options. Auto-convert it to a standard shape. Auto-convert it to another shape. Add the tool to the drawing. When you add the shape to the drawing, the stylized shape is applied to the shape.

ViewLayers: See how your drawings layer, and view each layer on its own color scale. Layer Control: You can control the visibility of layers, view every layer separately, change the color of the layers, and view the layers for three-dimensional drawings.

Object filters: You can filter the objects in your drawings by object type, the shape of the object, material, and other filters. You can choose the type of filter and the order in which you view the objects. You can view any number of
