It can be purchased as a stand-alone software package, or as an extension for AutoCAD. Architecture allows the creation of 3D models for the purpose of design, visualization, and documentation. AutoCAD Architecture creates two types of 3D models: 3D templates and 3D parametric models. Models can be linked to data, enabling them to be used with other programs such as Google Earth. Data can be downloaded into a 3D template in the form of drawings, sheets, blocks, components, text, annotations and graphics. The template can then be used as a basis for creating many similar models. 3D templates can be linked to data. Data can be of various types, including text, drawing, image, line, blocks and other drawings. AutoCAD Architecture includes a variety of advanced features for the creation of 3D models. It can be used to create parametric models based on 3D templates and AutoCAD can be used to generate them. Models can be created and viewed in 3D from within AutoCAD as well as from other AutoCAD packages such as Tech-Mentor Architectural Desktop. Mac AutoCAD for MacOS X was released in April 2008.
