Start the QtScript module and get Bot-chan into debugging mode: Next, make sure QtScript is the active module, press the File->Set as Active Module menu, and choose QtScript: You should now be able to make a QtScript script with the console. Example 1: sendfile botchan.setDebugging(true); // disable DCC QFile file(":/Users/Fred/Desktop/Example.txt"); if (!file.open(QFile::ReadOnly)) file.close(); QFile sentfile; QFileInfo info(&file); QString sentfilepath = file.fileName(); if (!info

Last Updated 2012-10-01 Sarcoidosis presenting as obstructive uropathy. The case of a 40-year-old woman with a history of pulmonary sarcoidosis treated with prednisone is presented. The patient became symptomatic with renal failure in a context of recurrent infections. A ureteral stricture was diagnosed following a retrograde pyelography. This obstruction was due to a granulomatous mass compressing the ureteral lumen. An urgent nephrectomy was carried out.Q: How to validate file type of uploaded file in PHP? I am uploading a file and displaying it to the user in a textarea This is done in PHP. If the user uploads a text file it is displayed fine. However, if the user tries to upload a zip file, the file will just be inserted into the textarea. How can I restrict the user to only upload text files? I have tried the following: if (!$_FILES['userfile']['type']=="text/plain") { header('Location:../error_page.php'); exit; } (and vice versa for the extension, and the blob for images) but this does not work. Thanks for any help. A: This requires that b7e8fdf5c8

+Qtbot-chan is a simple IRC bot that you can use to make your web-based IRC client look like a "native" client. +The reason for this is that web-based clients are able to have plugins and scripts that you can run while you are away from the machine, or you can just use the scripts to make your bot do what you want. +Bot-chan can connect to Freenode and/or #ruby. +You can setup Bot-chan to connect to any server you wish. You can even configure the bot to have more than one server (your choice) +This can be done by adding the "server" command to the bot-chan setup file. +The format of the "server" command is server_name:port_number (example: python:6665). In this case, the python server will listen on port 6665. +This will allow bot-chan to connect to a server that isn't just Freenode. +Bot-chan supports two protocols: + o DCC + o File Transfer Protocol (FTP). +There are two commands available: + o dcc= + o start= + You can find more information in the documentation. +Basic Usage: +bot-chan listen -listenPort=5353 +bot-chan help +bot-chan setup.cfg + +bot-chan will listen on port 5353 (default) until you explicitly close the port. The listen_server is the IP and port number to use for the bot-chan to listen. +You need to set a password for the server (you can just set it to 'botchan') before connecting to the bot-chan. +The format of the setup.cfg is pretty simple. You simply need to write a number of lines. Each line consists of two parts. + The first part is one of the following keywords or other commands: + keyword - allows the bot-chan to continue in a specific state + repeat - is used to start the bot-chan again after the pause + sync - is used to start the bot-chan in sync with the server + daemon - is used to start the

While a silent Bot-chan is a very helpful monitoring Tool, a chatty Bot-chan is a very fun tool! Bot-chan Features: - DCC support - File transfer - Timer - Network timeout and retry - Scheduled commands - Commands sub-menu - Telepathy auto-configuration support - Default configuration file support - File extension filter - Many options and variables - Easy to use Bot-chan Package Requirements: The package includes a few things, a Qt-Library, the Bot-chan binary, and a helper batch file for setting the default user agent. What's New in Linux? Unable to install Wireshark 2.0.1 Hey, I'm getting an error when trying to install Wireshark. (this would be after I did sudo add-apt-repository ppa:wireshark-dev/stable). Failed to fetch 404 Not Found Failed to fetch 404 Not Found Reading package lists... Done E: Unable to locate package wireshark A: You have to add the universe repository for Wireshark. You can do this by doing: sudo add-apt-repository universe Then try installing Wireshark again. Q: python - create lists with same lengths and concatenate them This question is probably very basic but I am stuck on the solution. I am trying to create a list of lists with the same length. I can't use the append method in my case because there are many values. I've been reading about it and found out how to do it with numpy arrays, but I have no idea how to do it with lists. So for instance, if my input is: L = [['a', 'b', 'c', 'd', 'e', 'f',

'g', 'h'], ['x', 'y', 'z', 'a', 'b',

System Requirements For Bot-chan:

You have to select Linux version 2.6.21 for Linux and Windows XP (Service Pack 3) for Windows OS. We are not allowing Linux Ubuntu 10.04 (LTS) and above (Updated Kernel). Windows XP (Service Pack 3) SP1 or later with GPU supported. We are not allowing Windows Vista SP1 and above and Windows 7 and above. Have at least 1 GB of RAM. Or you can use a low end desktop with 512 MB of RAM for testing purpose. We are not allowing NVIDIA
