For the first time in FIFA, the gameplay simulation models are able to capture the fluid, authentic movement of players. Over 100 visual, audio and gameplay improvements have been made in the player models since FIFA 19. The goalkeepers have been given new animations for goalkeepers to arrive, making them fit into a new first-person camera perspective. New player density-based physics have been added as well as new off-ball triggers to further enrich the sensation of playing in the world's most immersive football game. "FIFA Ultimate Team" is a new feature with players that can be unlocked and upgraded in-game. Fans will be able to earn coins for successful goal scorers and assists in FIFA Ultimate Team, to buy packs with premium players. The player loadout feature, which gives players the ability to easily preview custom and pre-made loadouts in the My Team section. The new My Team feature supports Fan Questions and includes an opponent database as well. "FIFA Premier League" has been redesigned to offer fans the chance to live in the world of English football. Fans can now create Premier League clubs and manage players as well as scout top players from around the world. The new system allows fans to invest into clubs, which can then be managed for up to five seasons. There is also a new editor to create and edit stadium and player photos. "FIFA League" has been redesigned to focus on a five-game franchise model, which lets fans make their own season. They can compete against friends, or play against AI opponents, who will feel more human and make more realistic mistakes. FIFA Ultimate Team is also getting a major graphical upgrade, which adds more depth and detail to the game world. FIFA Player Ratings are also getting new functionality, along with new audio and animation, which will help make you feel more connected to the experience of playing FIFA.Q: Python: Beautiful Soup - Set value of a child node I am trying to set the value of a child node for the first parent found of a div that contains text. I can set the value of every sibling but I just can't figure out the right structure of one to be able to access it. I have tried: divnode = soup.find(id="note").parent value = divnode.previous\_sibling divnode.previous\_sibling = value.string But it throws a
