I want to make a zoom on my e-featured image and then make a thumbnail with a border and excluded this images so the rest of the page can be populated. I've seen some tutorials using "ImageBuilder" but when I make a loop of every image to thumbnail, both methods are not working. Could you explain what exactly am I doing wrong? Thank you. A: The Thumbnail size it's just making smaller part of the original image to draw, but Image Builder is resizing the whole image in resized size. So you should resize the entire image with the ImageBuilder before make Thumbnail of it. Q: CSS: How to move a selected image after hovering this picture clearly describes what I want to achieve. To be more clear: I want my selected image to be position next to my hovered link. I'm using the following code: `#preview { width:600px; height:300px; background-color:#F3C0E0; border-radius: 8px 8px 8px 8px; position: relative; } #preview:before { content: ''; display: block; width: 95px; height: 95px; border-radius: 15px 15px 15px 15px; background-color: #E2E2E2; position: absolute; top: 11px; left: 10px; border: 1px solid #E2E2E2; -webkit-box-shadow: 2px 2px 5px #808080; -moz-box-shadow: 2px 2px 5px #8080`
