### **What's new:**

**of Alexandria Hypatia of Alexandria was a Greek philosopher and mathematician of Alexandria, Egypt, born c. 370. She is considered to be one of the greatest female mathematicians and astronomers of antiquity. Throughout**

her life she made numerous contributions to her field of expertise, with her work on trigonometry being significant and her most influential accomplishment being her **Book On Spirals**. Little is written about Hypatia's life, but most scholars agree that she was born c. 370 into a well to do middle class family. At the age of about 19, around 400 c.E., Hypatia met Synesius of Cyrene. According to tradition the two fell in love and were married. Under the patronage of this relationship, at the age of 23 Hypatia became a follower of Plato and was one of the first women of higher learning. She introduced her husband to her mother by sending him a letter, through which he became even closer to Hypatia. Hypatia was known to be gifted and talented in learning, but her underdevelopment in traditionally female ways and roles during her life is a result of her conservative mindset regarding gender roles of the time. One of the most important events in Hypatia's life took place in 415 c.E., when she became the leading mathematician and astronomer of her time. It is at this moment that her philosophical prowess and understanding of physical science reached its pinnacle. After this and during the next two years Hypatia devoted herself to studying and translating books written by Archimedes, a Greek scientist from Syracuse and mathematician from the third century b.C. Legend has it that between 400-415 c.E. a newspaper writer from Ephesus named Hypatia worked for Hypatia. The article was critical of Hypatia's marriage to her husband Synesius. This led to a well-respected philosopher from the city of Alexandria, the famous Arius. The two met up outside a public bath and discussed the topic in front of many witnesses. After this conversation Hypatia was defamed from which she decided to delete her defenses, her **Book of Discoveries**. Among other things she said, in reading the aforementioned supposed article, she saw no reasons why she should not express her opinion as she had a mind for this. In order to further test her opinion of the Church's teachings she was conducting her own research and had become a distant student of Plato, an honorary title among
