photographers, graphic designers, web designers, comic artists, or anyone looking to learn how to edit images in the digital dark ages. It is an easy-to-use, basic version of Adobe Photoshop. It's made for simple photo editing tasks like cropping, making a background, and altering shadows and highlights in images. It also includes quick fixes and basic photo enhancements. Additionally, it has the ability to create PNG,

---

JPEG, GIF, TIFF, and BMP files. If you're more interested in creating your own images and designs, the more powerful software, Adobe Photoshop, is out of the question because it's too complicated and requires a significant learning curve.

Reviews of Adobe Photoshop Elements 12 Adobe Photoshop Elements 12 reviews from various users, along with software performance and reliability ratings, are available

Randomized controlled trial comparing rubber band ligation with betadine and acetic acid in the treatment of internal hemorrhoids. Rubber band ligation (RBL) has been accepted as the treatment of choice for second- and third-degree internal hemorrhoids. We sought to determine if betadine and acetic acid performed as well as RBL in the treatment of internal

---

hemorrhoids. One hundred and one internal hemorrhoids were randomized into one of five treatment groups: oral and rectal betadine alone; rectal betadine and acetic acid; oral and rectal betadine and acetic acid; RBL; and placebo. Each patient underwent initial treatment with the assigned agent and was assessed for complete resolution of symptoms. Clinical efficacy was similar for all agents used in treatment of

---

hemorrhoids. Phytobiome response to long-term glyphosate exposure and its impact on soil health and plant resistance to *Fusarium oxysporum* f. sp. *lycopersici*. Glyphosate is the most widely used herbicide worldwide, impacting soil microbiology and, hence, affecting plant growth and health in soils. However, the real impact of glyphosate on the rhizosphere microbiome is not well defined. It is known that

---

some microbes may negatively impact on crop health and resistance to diseases, resulting in decreased yield and quality. Hence, this study aimed to determine how glyphosate exposure during crop production affected the chemical properties, phytobiome, and microbiota of soil before ( $n = 15$ ) and after ( $n = 15$ ) succession to wheat. Eukaryotic microbial diversity was analyzed by a 454 pyrosequencing approach,

---

whereas the chemical properties of soil were determined by measuring physical, biochemical, and biological properties. The data were analyzed using chemical diversity analysis (Canoco 5) and a multivariate data analysis (Canoco 4.5). The results showed that total eukaryotic microbial diversity increased from 0.95 to 1.22, but the number of rare sequences decreased. The dominant microbial community before

---

sowing was

Thermoactinomycetaceae and Ruminococcaceae. After succession, the dominant community was increased mainly by the Bacteroidetes phylum, in particular by Comamonadaceae and Burkholderiaceae, and was associated with the decreasing soil water content.

Carbohydrates and organic matter were significantly higher in plots that received glyphosate. All the measured parameters

---

were positively affected after sowing. With respect to disease, significant differences were detected for

What's New In?

1. Field of the Invention The present invention relates to a laser video disk recording apparatus and, more particularly, to a laser video disk recording apparatus which is provided with an automatic focusing system for

---

automatically focusing a laser beam on a recording surface of a laser video disk. 2. Description of the Prior Art In a conventional laser video disk recording apparatus, as shown in FIG. 1, a laser beam emitted from a laser beam source 10 is collimated by a collimating lens 11. The collimated laser beam is reflected by a half mirror 12 and focused in the direction of a video disk 13 by an objective lens 14. The video disk 13 has a

---

surface on which pits are formed. The laser beam reflected by the video disk 13 passes through the objective lens 14, is reflected by the half mirror 12, and then is guided to an eyepiece 15. A reference sensor 16, which is located on the optical axis of the objective lens 14, detects the reflected light from the video disk 13 and feeds a focus error signal indicative of an out-of-focus state of the laser beam to a servo circuit 20. The servo

---

circuit 20 comprises a control circuit 21, a D.C. motor 22, a D.C. motor 23, a speed governor 24, and a focus control circuit 25. The objective lens 14 is adjusted so as to bring the laser beam into focus on the video disk 13 in response to the focus error signal from the reference sensor 16. The adjustment is carried out by the focus control circuit 25. FIG. 2 shows another conventional laser video disk recording apparatus, in which the

---

structure of the apparatus as shown in FIG. 1 is simplified and similar parts are numbered the same. In FIG. 2, reference numeral 30 denotes an objective lens, 31 denotes a laser beam source, 32 denotes a divergent lens, 33 denotes an imaging lens, 34 denotes a video disk 13, 35 denotes a laser beam incident from the video disk 13, 36 denotes a light beam reflected by the video disk 13, 37 denotes a video image, and 38 denotes an

---

eye. In the arrangement of FIG. 2, the portion of the laser beam 35 reflected by the video disk 13 is imaged on the image sensor 38. This type of video disk recording apparatus generally is referred to as a coaxial system. In the conventional laser video disk recording apparatus, when it is in use, i.e., when an image to be recorded is to be reproduced, the laser beam source 30 is energized
