In Persia 1856, the Shah of Persia forces the British East India Company into the south of Iran. The Company has decided that the right and only way to achieve its objective is to invade the country and force the Shah to withdraw his forces from Afghanistan. The Persian player will try to avoid the invasion and will try to make the British abandon its goal. Persia 1856 has a nice strategic design and a lot of variation thanks to the diplomacy and wars cards. Each nation has a two weeks time period to accomplish their objectives, this means that besides the start of the game each player has 4 weeks before the end of the game to achieve them. Persia 1856 is an 'end game' war game while Persia 1856 is a 'mini game'. Persia 1856 is a cooperative game, played by two players or two teams, and uses the full 12 days of the game. The game runs for 12 months, with three seasons of 3 weeks between them. The game is won or lost in the last turn. There are 24 different card types, specially designed to stand in for diplomacy and wars. The card stocks are dispersed and random to avoid the problem of 'Good Luck' card types in some of the games. The game runs in a nice interactive map, where you can mark all the land and naval hexes that you control with a pencil. - Land hexes that are captured by the other player become unavailable for colonization. - Land hexes that are taken by the enemy become one of four types of unavailable hexes, they can: a) not be used in construction unless you are not using the number of rolls needed to cover the coast lines; b) must be used for construction as if the tile was empty, but cannot be used in any other capacity until the coastline counter reaches zero; c) cannot be used for occupation of tiles; d) are not used for construction and occupation unless you are using the number of rolls needed to cover the coast lines. - when a tile becomes unavailable all construction is halted. - when tiles are completely covered all land and naval hexes are unavailable. - The seaward borders are fully controllable by the owning player. - The River hexes are fully controllable by the owning player. - The lake hexes are fully controllable by the owning player. - The hexes at the sea shore are fully controllable by the owning player. c9d1549cdd

And Mouse Say About Sexism To summarize much of what the duck and mouse say about sexism, and things that must be said before moving too fast: The correction factor in the Joel Test is not a factor that makes or breaks a developer. That correction factor is meant to be a sane factor that, if the project is near a genuinely challenging or esoteric subject, can alter or invalidate your plan. At best, it causes you to re-evaluate your stupid plan. At worst, it causes you to never execute. Bringing fun into it: 1. You may be: Cretin / Impoverished / The victim of domestic violence / Living with terminal cancer / It's OK if you are / It's OK if you are / It's OK if you are / You're fabulous / JUST KIDDING! / Jim Gaffigan / Bryan Cranston / Tom Hanks / A plumber or other functional, totally harmless non-engineer. 2. You may also be: A genius / A webdesigner / A designer / A professional / An aspiring professional / An employee / A professional procrastinator / A mature working professional / A mature / An education student / An honest person / An entrepreneur / An inventsperson / A masochist / An activist / An entrepreneur / A parent / A married person / An experienced adult / You are a sexy animal / A person who wants to help other people become all of the above / The head of a women's college / An older person of both sexes / A virgin / A loveable goofball / Special breed of dolphin / You can sing like a rock star / A child molester / A person who cares about other people / The poop emoji 3. The funny fact is that at the end of the day, whether you are struggling with these concerns or not, you often have a baby-faced kid / a goofy puppy / a fierce believer / a robo-dragon / a girl-power superhero / a cool car / a pack of puppies / or a wild murderous Russian psychopath lurking in the background... 4. Well, OK, it's slightly complicated. A change often can make a difference, but not always in the picture you're building. Changing the picture often is what agile is all about, and I don't mean just new talking points or new biases

Washington (CNN) President Donald Trump on Tuesday will deliver a long-expected speech on trade, and it will mark his second time giving an economic address since taking office as well as his first since taxes were released. His speech comes as the White House prepares to propose new tariffs on imports of aluminum and steel to the White House Council on Trade and Industry. Although his appearances are meant to promote his economic and tax reform efforts, a senior administration official cautioned that there may not be a single economic speech forthcoming from Trump in the future. There may be many different speech topics or possibly a speech that focuses on two or three themes. White House spokesman Raj Shah said the speech could be an extension of his 2015 State of the Union address that discussed trade reform. He said there have been "ongoing conversations" with the Commerce Department since then. Shah said it is appropriate to look for past examples in how Trump has addressed trade during the past few years. "You've seen the President talk about different issues before. Trade policy, trade laws. This is not a new thing," Shah said. "He's been very clear on
