A gas turbine engine is a well-known example of a turbomachine in which an end of a turbine shaft or rotor shaft is secured to a disk called the `hub` (also known as a `disk`) which in turn is secured to the casing or disk. The casing

comprises a plurality of disks stacked one above the other to form a main rotating assembly, which in turn drives the compressor. In order to start the engine it is necessary to turn the end of the turbine shaft in order to rotate the hub and the disks to position the compressor at a location at which it is ready to receive intake air. This rotation is usually done using a power starter which is activated by the supply of electrical current to an electro-magnet. The current flow starts a current path through a field winding which generates a magnetic field that interacts with the disk magnetic field to rotate the rotor. Once the rotor has been rotated sufficiently to reach an operating speed the starter is switched off and the engine is allowed to run freely from that point onwards. The final speed is determined by the ratio of the rotor surface area (that is, the area taken up by the rotor disk) to the compressor area. Therefore, as the engine runs down (that is, as the engine speed becomes less than that required to maintain the rotor speed) the compressor area reduces in size as the rotor surface area is maintained. This reduction in compressor area reduces the compression ratio of the compressor which in turn reduces the amount of work that can be produced by the compressor, and therefore reduces the efficiency of the engine. ca3bfb1094

Q: How to fix z-index bug in aria-live-hint I'm trying to implement a quick search box for a project of mine, and I have an issue with the z-index in the aria-live-hint attribute. I added a div, and use z-index: -1000 on the div so the input can be highlighted when the focus is not in the input. This works fine in Firefox and Chrome, but in IE 11 the text doesn't get focus as the input does, even though it is the first-child. If I use z-index: 1 on the aria-live-hint, it gets focus on all browsers. How can I fix this issue? My html code: CSS: .searchbox { width: 500px; padding: 20px 0; border-radius: 10px; -webkit-border-radius: 10px; -moz-border-radius: 10px;
