ams business card maker crack ams business card maker download ams business card maker full free download.1612 is better. Figure \[fig:bima3\] exhibits a graphical comparison of the runtimes of the four algorithms. We observe that Bi-Asymmetric MA<sub>{12}</sub> and Bi-Asymmetric MA<sub>{17}</sub> algorithms outperform the original MA algorithm by a factor of ten. ![[Runtime comparison: Bi-Asymmetric MA<sub>{12}</sub> and Bi-Asymmetric MA<sub>{17}</sub> algorithms are better than MA algorithm by a factor of ten.]](tldr1217\_time "fig:")\{width="50.00000%\}![[Runtime comparison: Bi-Asymmetric MA<sub>{12}</sub> and Bi-Asymmetric MA<sub>{17}</sub> algorithms are better than MA algorithm by a factor of ten.]](tldr1217\_time\_new "fig:")\{width="50.00000%\} A comparison with the state-of-the-art ----- We use the COIL100 database, a well-known image sequence database that includes \$100\$ images of \$100\$ objects (samples) from \$7\$ classes. Since our MA algorithms are designed for class-specific recommendation task, we are only interested in comparing with the state-of-the-art algorithms where they apply their models to the target classes. For example, the first one compares the MA with the state-of-the-art algorithms such as BCTD [Campos2011; Oliveira2015], CSIM [Oliveira2015], iCARM [Ma2015]. The second one compares the MA with the state-of-the-art algorithms such as cVEP [Smeulders2011] and Block Coordinate Feature Learning (BCFL) [Liu2014]. Table \[table:COIL100\] shows the results. The first three algorithms compare the MA with respect to the state-of-the-art algorithms for models such as the Mahalanobis distance (MD) [Campos2011; Oliveira2015], the Euclidean distance (ED) [Campos2011; Oliveira2015; Ma2015]
