Robot-assisted surgeries have been rapidly evolving over the last two decades and more recently, have become an advanced treatment option for the management of obesity. Robotics is currently being used to assist with a range of surgeries, including gastric banding, sleeve gastrectomy, gastroplasty, and roux en Y gastric bypass. As robotic technology has become more advanced and refined, it has become the ideal tool in the surgeon's armamentarium for the management of obesity. Robotic surgery has been shown to significantly shorten hospital length of stay and reduce costs compared to laparoscopic techniques. Robotics has also been shown to be an effective technology in reducing surgical and recovery times and complication rates and is a possible alternative to open procedures. It has been shown to be particularly useful in the treatment of patients with extremely complex pathologies or obese patients with contraindications to open procedures. With the many advances in the field, the application of robotics has expanded its use in bariatric surgery. This article will focus on the technical aspects, background, and future trends of robotic bariatric surgery.I love how this dude's face turned into a pure instinctive reaction. I've seen people freak out like this in real life, usually when they see a police officer or security guard. When they see that they are under no threat whatsoever it is like a force of nature blows through them and they just can't help it. I'm sure this was nothing more than one of those road rage situations where no one was going anywhere fast enough to trigger anyone's aggressive reactions. A
