Korg Pa Manager 2.1.2315 Crack keygen serial numbers is an awesome application. Its an audio equipment manager developed by korg. Korg PA manager v2.1 Crack is an awesome application.Q: Alternatives to '>=0' in elif statements I am learning about programming with Scala, and I have a question. I am defining a simple math function that returns positive if the first argument is greater than or equal to the second argument, and returns negative if it's not: def myMathFunc(first: Int, second: Int): Int = { if(first > second) { return 1 } } I can think of a number of ways to make this code more elegant, but I'm not quite sure which is the right way. Here's some examples: Use > instead of >= to be a little less redundant, and I'd think that I should be doing this. Use > or!= instead of the two > statements. Do something else? As a Scala programmer, which of these seem more intuitive to you? Also, if you see something I've missed, please let me know. A: using the safe navigation operator, which is ^ to the right of the less than/greater than: def myMathFunc(first: Int, second: Int): Int = { if(first > second) { first ^^^ second } else { -1 } } you can use the!== operator, as it is equals except for one side: def myMathFunc(first: Int, second:
