AutoCAD LT and AutoCAD, AutoCAD for LT version 12 and later, are both integrated development environments for creating 2D and 3D drawings. AutoCAD LT does not support the AutoCAD Architecture or AutoCAD Electrical add-on products. AutoCAD LT is targeted toward educational and home use as opposed to being more widely used in the design industry. AutoCAD LT supports all of the same drawing formats as AutoCAD, including DXF, DWG, DWF, and STEP. It is marketed for use at school and in homes and can run for as little as US\$70 per year. It supports Dynamic Content, enabling the use of models, animations, and embedded links. It also supports plugins. Awards AutoCAD earned a market position as a design tool by publishing AutoCAD Training from 2002–2012. AutoCAD Training publications have become the premier resource for AutoCAD. The Academy of Visual Arts of the Netherlands, an organization of visual artists, has an official seal of approval for AutoCAD and its add-ons. AutoCAD Architecture, AutoCAD Electrical and AutoCAD Civil 3D were awarded the 2012 Benjamin Franklin Gold Award for innovation in the software category. Criticism AutoCAD has been the subject of criticism, often expressed in the form of poor design, poor documentation, insufficient support and high prices. These criticisms have been presented in various ways, including media articles, scholarly articles, books, design contests, and formal complaints to Autodesk. Terminology In 2018, Autodesk changed the terminology it uses for a given object. Previously, an Autodesk-generated technical document called a drawing called a "dwg", or "drafting". Since 2018, the terms "dwg" and "drawing" have been replaced by the terms "draw" and "drawing". This is done to make all technical documents "drawings" regardless of their type. This change was to be implemented in Autodesk 2019 software.
