| AERIAL SHOT, HANDHELD PERFORM GALLERY POINT-AND-SHOOT BANDEIRAS MOUNTED SHOT SHOT WITH SUPPORT ARREST SHOT | --- | --- | --- In this chapter you will learn the following: * Creating and applying a stylistic filter to an image * Using the Quick Selection tool * Creating a layer mask * Practicing the best way to brush and paint * Using Content-Aware filling * Choosing image retouching techniques WHERE TO START In Chapter 1, "Understanding the World of Digital Photography," you learned that images are based on a matrix called pixels. These individual pixels form the background for digital images. They are the building blocks for any digital photograph. They create the image whether you're shooting on a point-and-shoot camera or a digital SLR camera. They also ensure that the image can be enlarged to a life-size print. In Chapter 2, "Choosing and Working with Lenses," you learned about the different effects created by lenses. Those effects depend on the focal length of the lens. In this chapter, you'll learn about the different ways you can create those effects. Let's start with a quick tutorial on creating the effects you will be working with in this chapter. Getting the Look Because the effects discussed in this chapter have a cinematographic feel to them, you will need to play with various styles of lighting in your images. Photoshop's Layers panel shows you, at a glance, how deep your layers are and what their opacity levels are. Eyes are the most powerful natural light source. Furthermore, it's amazing how many ways you can add light to an image. The various styles discussed in this chapter can be done with natural light or by shooting with the sun behind the subject. It's all about timing and control, so try shooting a series of different images with different times of day. You will also need to experiment with different types of light. If you're shooting in controlled light, you have the option of using fill lights. A fill light is a flash unit that bounces into the scene to soften shadows and add color. A fill flash also adds the look of a hard light, which gives images a slightly three-dimensional feel. It

Susceptibility testing of Mycobacterium tuberculosis isolates in children, adult and elderly in Tunisia. Our aim was to study the antimicrobial resistance of Mycobacterium tuberculosis isolates in various Tunisian regions to antituberculous drugs (ATB). In order to characterize M. tuberculosis isolates, we used the spoligotyping method, performed to determine the prevalent Beijing genotype and determined the prevalence of resistance to rifampicin (R), isoniazid (I), streptomycin (S) and ethambutol (E) as assessed by the BACTEC MGIT 960 method. From 1998 to 2010, 784 clinical isolates were studied by spoligotyping. The Beijing genotype and MDR (resistance to both R and I) were found respectively in 257 (33.6%) and 90 (11.8%) cases. The most frequent MIC values for R were 24 μg/ml and for I were 0.2 μg/ml. In the Tuberculosis Unit of the Institute Pasteur Tunis, the MDR was found in 9 out of 99 (9.1%) among adults, in 7 out of 126 (5.6%) among children and in 67 out of 98 (67.3%) among the elderly. The Beijing genotype was also the dominant in the three age groups, although this genotype was also associated with non-MDR strains in adults and children. The presence of MDR strains was confirmed in the 6 regions studied. Our findings show a marked increase in the emergence of MDR tuberculosis, especially among the elderly.The subject matter herein relates generally to electrical connector systems, and more particularly, to an electrical connector system having a housing and a mid-plane insertable thereinto. Some known electrical connector systems include a housing and a mid-plane insertable into the housing. The mid-plane includes one or more terminals that are aligned with the housing. Terminals are aligned to corresponding contacts or sockets provided in the housing. The terminals may be electrically connected to the contacts using a fastener. A mid-plane of the known connector systems is typically aligned with a housing of the connector system during final assembly. Accordingly, the mid-planes are either pre-assembled with the housing or the mid-plane is inserted into the housing during the final assembly process.A novel approach to drug-resistance prediction by the analyzing of protein networks of Mtb. and, thus, move the reference point to the lower end of the screen, the view will still be shown correctly when the manual zoom (in window coordinate system) is set to a higher zoom factor. Most later televisions (and video cameras) will have an auto-zoom function. With most television remote controls it is possible to set a minimum and a maximum zoom factor which will define what zoom levels are used in the auto-zoom functions. Current tele-cameras Many high-end cameras, and some inexpensive ones, have a setting in the menu called zoom, which adjusts the field of view according to the distance between the lens and the subject. This is a feature particular to non-camera video recording equipment, which is to be distinguished from the zooming done by cameras. I have come to realize that standards standards. Standards standards! Apparently we've taught our children to hate standards. I want to sit down with each of them and say: Children, there are "voluntary standards," and there are "mandatory standards." What is a Standard? Let's take a look at a very simple definition: A standard is a set of guidelines for a product or service to be produced, used, or supplied. A standard is a standard, no matter the topic. It applies to vehicles, products, services, services, and production. In all of these areas, there are varying levels of success in our society. Some companies succeed, other fail. The "Standard" in "Standards, Standards, Standards" This isn't a new thing to me. As a parent (and a teacher, by the way) I'm familiar with the problems standards have brought to education. The problem is, I see more and more high profile educators speak out against standards. Yes, they are standards, and they are mandatory. No, the standards can't be taken away. No, the standards can't be more onerous than previous standards. No, the
