AutoCAD Basics When creating or editing an object, it will be displayed in the active drawing area or layer. The active layer is used for all further operations with the object and is indicated by a green line drawn on top of the layer, and the object is drawn on the layer as well. Let's create a rectangle with AutoCAD. First, make sure that the active layer is set to the "Blocks" layer. Then select the rectangle tool by pressing the R key on your keyboard. Then draw a rectangle on the blocks. Let's create a line segment. Press the S key on your keyboard and select the Line tool. Create a line segment by pressing the drawing area button (the left mouse button on a mouse) and dragging the mouse pointer on the line. Select the line segment by pressing the X key. Let's create a circle. Press the S key on your keyboard and select the Ellipse tool. Create a circle by pressing the drawing area button (the left mouse button on a mouse) and dragging the mouse pointer on the circle. Select the circle by pressing the X key. Let's create a rectangle. Which is the best language to develop a pure web application, where is no database or desktop application, but only web interface and any kind of widgets to access the data in the server, is it PHP or Java? How does it compare with Ruby on Rails? A: If your application is pure HTML + Javascript then it's going to be a little different from a desktop application that can be run standalone from an exe. From my experience, I've found the best approach is to choose a technology that gets out of your way and just gives you a "web-view" of your desktop/enterprise application. For example, with a desktop app, you typically only have one language/development environment/stack to deal with, which is where most desktop app developers go wrong. With web
