Make improvements with Markup Assist. Reduce frustration by working on a drawing document that captures your initial thinking and processes for creating a design that meets your specifications. (video: 1:15 min.) Markup Assist is a new tool in AutoCAD that allows you to work on a drawing document that captures your initial thinking and processes for creating a design that meets your specifications. We've long loved the power of LinkView; it's been one of our most powerful tools for creating dynamic, interactive 3D design presentations. The next logical step in improving the experience of LinkView was to bring that capability to drawings that have not been equipped with a view. Markup Assist is the result of that effort. We took LinkView's powerful capabilities and developed the ability to add markup on top of any drawing that has not been equipped with a view. To get started using Markup Assist, simply select a drawing that contains a view or a custom view that has been created with Markup Assist enabled. You can also add a view to a drawing with a custom view, or open the Drafting & Annotation workspace with Markup Assist enabled to work on views that are not visible in the Customize User Interface. You can add comments to a drawing, draw arrows or shapes, and add objects to the drawing. Each object has a set of properties that are used to configure how the object appears. For example, you can set the color and type of a line object to have a thickness of 2 inches, for example. Markup Assist is a new tool in AutoCAD, but it's one that is very easy to learn. To use Markup Assist, simply select the Add Markup option from the "More" dropdown and make your selection on the "Type to add" panel. To add an object, just select the button at the bottom of the dialog box. To create a custom view for a drawing with Markup Assist enabled, click the View button at the bottom of the dialog box. There are three ways to add views to drawings. Custom view in “About Drawing” window Custom view in Customize User Interface Custom view with Markup Assist If you have a custom view, you will be prompted for a name for the new view. A custom view is a view that has been created with the Markup Assist option turned on, just like a regular view. When you are prompted
