AutoCAD software can be used to create 2D and 3D drawings and models. The main tool that is used to create 2D drawings is the drawing creation tool, also known as the "rubber pencil". There is also a tool called the "schematic" or the "wireframe" that creates 2D drawings based on what is known as the "model". The "schematic" tool is very similar to a vector-based drawing program called "VectorWorks". Early uses In its early years, AutoCAD was used to plan the physical layout and mechanical details for the San Francisco Transbay Terminal project (later called the "Transbay Terminal" or "Transbay"), a complex transit and pedestrian underground transportation hub on Treasure Island, located between San Francisco and the San Francisco Bay. The Transbay Terminal project was also one of the earliest in the world to use computers for automated design, and one of the first that used CAD software. CAD was used to develop the floor plan, mechanical design, electrical design, construction drawings, and details for the Transbay's building shell. The project used a large mainframe computer, the 8086/PDP-10, a powerful 2D CAD program called "PLATO II", and a graphic user interface (GUI) on an 80386/286 and on VAX/VMS based workstations to perform the task. Workstations were also used for engineering analysis and visualization. The Transbay Terminal project also featured the first use of computer-aided manufacturing (CAM) machines in the construction industry. In those days, most custom home projects were built by framing and plastering, and then were finished with paint, varnish, and wallpaper. CAM machines enabled such a procedure for the first time. Early software AutoCAD's initial release was for the Xerox 8086/PDP-10, a small computer marketed in 1981. It is the first application to be released by Autodesk (originally Autotrace) that is a true CAD application, so it can be used to develop models of anything that can be drawn, such as airplanes, buildings, and so on. The software version was designed to run only on the Xerox PDP-10, which was a minicomputer with very little memory. The application code was written in Structured Basic, a proprietary programming language that has been replaced in later versions by a portable BASIC interpreter

Navisworks 2D design tools include: Intergraph, GeoMedia and Flow Design, Inc., which has their own suite of 2D software (P3D, FI, AMS, and Network Systems). Products Autodesk's AutoCAD software was the first CAD program to support parametric solid modeling and was the first CAD program to release a family of three-dimensional design software programs. AutoCAD software is also used as a preprocessor of the geometric modeling program Autodesk Inventor, which was released in 2010 and which is designed to allow drawing to be generated from parametric models. AutoCAD 2009 In the AutoCAD 2009 release, Autodesk added support for user defined material styles and material continuity maps. It also introduced a new plug-in architecture called the Application Programming Interface (API) and defined new possibilities for file and component merging. AutoCAD also had support for dynamic solids, supporting all types of shell and solid modeling. In addition, it is possible to create and edit bill-of-materials (BOMs) from 3D models. AutoCAD 2010 In the AutoCAD 2010 release, the changes include: improved behavior of drawings when they are moved, resized or when other elements in the drawing are modified, it is possible to export components from a drawing and add dimensions to the component, support for 360 degrees and spherical perspective, 3D Camera view, display of the parametric surface for each part of the object in a drawing, integration with Microsoft Office, support for 2D Visio document format and the ability to add custom properties to components, the ability to draw wave and spline curves in both the 2D and 3D workspace, support for the point constraint system, integrated.dwg scripting and native support for Visio 2003 format drawings. AutoCAD 2011 The new features in AutoCAD 2011 were: Support for parametric surface modeling, modeling solid volumes, added collision detection in the wireframe workspace, mesh modeling and interpolation, parametric surface views, collapse surfaces and layers, support for markup languages including the wiki markup language, ability to automatically link components of related objects, programmable native scripting using JavaScript and VBA, integration with Excel, model building support, improved layout tools, improved behavior when encountering circular objects in the wireframe workspace, the ability to increase or decrease the display width, reduce the size of the workspace, and render all components as af5dca3d97

The number of women seeking abortion services in the United States has increased sharply since the 2010 midterm elections, according to preliminary federal data released in August. The data from the Centers for Disease Control and Prevention show that 1,653,000 women in 2011 sought an abortion procedure. That's a 4.3 percent increase from the previous year, which was the first annual increase since the agency started tracking the number of abortions in 1970. The federal numbers count women who visited medical facilities and did not specify the reason for the abortion. They do not include abortions performed at home. Nationally, the total number of women having an abortion has increased every year since 2010. But the sharp rise in 2011 marks the first year that the percentage of women seeking abortions has grown since the early 1990s. The total number of women who had abortions is still less than the peak in 1980, when 2,342,000 abortions were performed. The increase was sharpest among women in their 20s, who saw their number of abortions increase by 12.7 percent. The numbers grew by 4.9 percent for women in their 30s, 3.9 percent for women in their 40s and by 5.6 percent for women in their 50s. The rise in abortions among younger women follows a nationwide trend that has increased with each successive birth cohort. In the decade from 1990 to 1999, abortions increased 2.4 percent for women aged 20 to 24, and declined by 1.1 percent for women aged 25 to 29. In the decade from 2000 to 2009, abortions increased 9.6 percent for women in their 20s and 18.7 percent for women in their 30s. The CDC report comes as many states, led by New York, have begun to ban abortions after 24 weeks, and some have extended those bans to include women whose pregnancies are caused by rape or incest. The laws have become a political flashpoint, with Republicans in Congress asking the Obama administration to enforce the Supreme Court's decision to strike down the bans nationwide. Abortion advocates say that the laws are not only unconstitutional, but will ultimately
