Mapping and database software As a foundation for CAD software, AutoCAD Serial Key supports the Auto-Map and AutoCAD Map databases, developed by Aufun in the 1970s and subsequently re-licensed to Autodesk in 1999. Auto-Map is a flat, hierarchical database used for storing and sharing CAD information. The Auto-Map database was first released by Aufun in the late 1970s, as the Mainor Programmer Database. In 1985, Aufun licensed the database technology to AutoCAD. This data technology allowed a lot of features to be developed to enhance the use of CAD, such as data exchange between other CAD systems, importing and exporting CAD data (including floor plans), and the ability to import and create/edit CAD drawings from a variety of CAD formats (vector, 2D-Bézier, etc.). The original Aufun AutoCAD was distributed as shareware, but was later offered as a demo. AutoCAD Map supports Auto-Map which can be used for viewing and editing AutoCAD drawings. Other applications and services The AutoCAD Raster Image Workbench enables users to view, create, edit, and compare 2D raster images. Image processing AutoCAD contains several applications for image processing, including ANSYS Xplor 3D, Pixologic Z-Digger, and SolidWorks. Autodesk provided the service provider for Autodesk Smoke. International AutoCAD has been translated into Czech, Czechoslovakian, Danish, Dutch, Finnish, French, German, Italian, Japanese, Korean, Polish, Portuguese, Russian, Simplified Chinese, Spanish, Traditional Chinese and Vietnamese. You should get a new entry in the Autodesk catalogue. In the Autodesk User Account, create an account for you. Go to Autodesk Autocad > File > [My Products] > [Product Information]. Create a new 'product activation key'. The activation code should be your serial key. Go to the 'Autodesk Autocad' menu and click 'Enable Autocad'. You can now start using Autocad. Q: Get the last digit of a string in C# I have a string: var s = "132332"; I am trying to get the last digit from that string, so I have tried: string lastDigit = s.Substring(s.Length - 1, 1); But I always get the value 3, and not 2. Why is that? A: You can do string lastDigit = int.Parse(s.Substring(s.Length - 1, 1)); or string lastDigit = s.Substring(s.Length - 1, 1).Trim('0'); or string lastDigit = s.Substring(s.Length - 1).Substring(0, 1); If you need to get integer value of a number and not a string you can do string lastDigit = Convert.ToInt32(s.Substring(s.Length - 1, 1)); This is the simplest way, but it is not the most efficient. If you have int you can use it as well: int lastDigit = s.Substring(s.Length - 1).LastOrDefault(char.IsDigit); A: That's because the Substring method returns the last digit and not a string containing the last digit, like when you do a.Trim() on the string. You could try the following: string lastDigit = s.Substring(s.Length - 1, 1).Trim('0'); A: I suspect the issue here is that Substring returns a string. You are calling Substring and it returns a string. The Substring method return the remaining string after the index you specify, but not the number itself. Perhaps if you wanted the last number: string lastDigit = s.Sub
