AutoCAD is not available for free. Although most of AutoCAD's features are targeted toward architectural, mechanical, and civil engineers, AutoCAD does offer a variety of tools and features for artists, photographers, and other creative professionals. The first version of AutoCAD (version 1.0) was released in December 1982, and was developed in the AI-6600 office automation language called VisioVision. The AI-6600 ran under the CP/M operating system on the CP/M-68000 microcomputers. VisioVision and the CP/M operating system did not mix well, so the AI-6600 microcomputer was discontinued in 1983 and the operating system was discontinued in 1984. AutoCAD versions 1.1, 1.2, 2.0 and 2.1 were released for the CP/M 68000. AutoCAD version 3.0 was released for the IBM PC-compatible platform and Mac OS and was re-released with AutoCAD version 2012 (2.0) and AutoCAD 2013. There are some important distinctions to note between the original 1982 version of AutoCAD and its descendant AutoCAD 2016: The original 1982 version was one of the first major applications written in the AI-6600 language. The AI-6600 was a high-level, flow chart-like programming language, so it is also known as Visiophot. The original 1982 version of AutoCAD, which was known as AutoCAD for the Motorola 68000, was a DOS-based application. The original 1982 version of AutoCAD did not support the mouse, windows, menus, or the ability to run on multiple platforms. There was no undo/redo or undo/redo history. The original 1982 version of AutoCAD did not support the ability to dynamically change the position of objects (tools), so it was not possible to have a pallet (inventory list) of objects and move them to a new position. AutoCAD 2016 was developed in AutoCAD LT, AutoCAD 2010, and AutoCAD 2011. This is a long history, and the original 1982 version of AutoCAD did not have a similar time-line. AutoCAD 2016 is available for the

The object-based modeling method, ObjectARX, is the easiest form of modeling within AutoCAD to use. ObjectARX models are always active, making it easy to move, edit, delete, and scale objects within a drawing. Additionally, unlike AutoLISP, where you would have to set up a macro and manually execute it, ObjectARX allows you to simply type in a function name or statement and press F2 for it to run. The Freehand Drawing feature uses the ObjectARX API. Freehand is an efficient drafting and drawing application developed in a similar manner to the AutoCAD drawing environment. Freehand is also known as the "eDrawings" (now known as VectorWorks) software and has its own Application programming interface (API). This API exposes the functionality of Freehand to other applications, such as Microsoft Visual Basic for Applications (VBA) and Microsoft Excel for Windows. The eDrawings software is part of the Integrated Modelling Environment (IME) suite of programs. The functionality of ObjectARX is similar to VBA, and its drawing capabilities extend those of the legacy AutoCAD drawing environment. In 2012, Autodesk has released ObjectARX Pro edition, a better version of ObjectARX for Architectural, Engineering and Construction (AEC) users, which can be used with AutoCAD Mechanical and AutoCAD Civil 3D CAD (computing) applications. With the upgraded version, it supports the native 2D and 3D digital modeling features of AutoCAD 2010, without depending on external code. Visual LISP Visual LISP is a programming language for AutoCAD that allows users to customize AutoCAD's drawing and analysis capabilities. Visual LISP was originally used for the AutoCAD visual programming language, a pre-Visual LISP derivative, which allowed users to create parametric models. Since then, it has become a general programming language that is also compatible with AutoCAD. Its support in AutoCAD 2006 was crippled by the release of AutoLISP. It is a programming language that relies on a module system similar to the BASIC programming language for IBM-compatible personal computers. Visual LISP uses a double-click method to execute statements. As in AutoLISP, only two statements can be run at the same time. Visual LISP also uses preprocessor directives, like C and C++. Various patents have disclosed non-toxic combustible compositions having an oxygenation value of from about 0.1 to about 2.0. In U.S. Pat. No. 3,446,688, a mixture of starch, water, and a binder material is fed to a microwave oven and the resulting material is pulverized and heated to from about 150.degree. to about 300.degree. C., preferably from about 170.degree. to about 220.degree. C. in about 12 seconds. The material is then processed at a temperature of at least 100.degree. C. and preferably from about 200.degree. to about 350.degree. C. for from about 5 to about 20 minutes and cooled to provide a non-toxic material having a oxygenation value of from about 0.2 to about 2.0. In U.S. Pat. No. 3,542,820, the patentee teaches that the reactivity of the starch composition is enhanced by the addition of water and a binder. U.S. Pat. No. 3,600,186 teaches that the reactivity of the starch composition is enhanced by the addition of water and a binder to prevent lumping. U.S. Pat. No. 4,141,935 teaches that a proteinaceous material is combined with a chemical propellant and water. The propellant and water are maintained in a vehicle but a small amount of the propellant and water is held back from the vehicle. Upon the addition of heat and pressure, the reaction of the propellant and water produce a solid material. U.S. Pat. No. 4,141,936 teaches that in the process of U.S. Pat. No. 4,141,935, the quantity of propellant is held back from the vehicle, a proteinaceous material and water are combined, a plurality
