In this case, the resolution of the typical simulation (model C30Q30) is not high enough. Figure [ef]a shows that, beyond a critical value of the adopted resolution (models A10Q10 and C30Q30), the initial eccentricity distribution matches the value predicted by the criterion ([ec-1]) for a given $\frac{k}{M}$. Conclusions
===== In this paper, we applied the formalism described in Paper I to a population of zero-age MS (ZAMS) and RSGs of mass $\sim 7-20 M_{\odot}$, formed by a star cluster with a total mass $M_{cl} = 7 \times 10^4 M_{\odot}$
