It also sounds like a plot from a 1950s spy movie. The government of India is not a member of the Paris climate accord, but it is one of the world's top buyers of natural gas, which many experts say is the key to reducing greenhouse gas emissions from India's rapidly growing energy market. A number of Indian utilities are currently building projects to import liquefied natural gas, which can be more cheaply shipped and used more efficiently than onshore gas. Perry said in an interview with the Washington Examiner that the U.S. is working with China to lower prices for natural gas. But analysts say that China's natural gas industry is in decline due to overcapacity. "Perry has pointed to one country with huge natural gas reserves that is the world's largest producer of natural gas and the world's second-largest consumer of natural gas—a dramatic conflation of natural gas users and natural gas producers," said Tyler Huffman, a professor at the University of Texas at Austin. India's expanding energy market is a major target for U.S. firms looking to sell more energy exports, but China's market is also important to them. But the idea that Perry is saying the U.S. will help China deal with its falling natural gas industry is "categorically false," Huffman said, and would be a "huge risk" for the U.S. and its energy industry. Since the 1990s, the U.S. has been selling natural gas to India at a low price, ff5e5ca8c9

Barriers to Adoption of Electronic Health Records: A Mixed-Methods Study. The purpose of this study was to assess how primary care providers (PCPs) and their staff view barriers to implementing a fully functional electronic health record (EHR) system in a rural, high-poverty, federally qualified health center (FQHC). The Rural Practice Environment Survey (R-PE) (designed by the Rural Health Research Center at the University of Texas at Austin) assessed attitudes about practice conditions and the barriers to implementing EHRs. PCPs and staff at 1 FQHC completed the survey (N = 31). The open-ended questions asked participants to describe their attitudes about EHR barriers and if they had any additional comments. Qualitative data were collected from an additional 19 PCPs and staff. The closed-ended questions were assigned Likert scales. The survey was completed in March 2015. All survey participants reported the EHR was necessary for patient care. The majority of participants (71%) indicated that the EHR would help improve patient care. Approximately 20% of participants stated that administrative barriers, 25% noted technical problems, 22% indicated human factors, and 24% stated that cost was a barrier to implementation. Survey responses suggested that PCPs were concerned about privacy and security and felt they lacked training on how to use the EHR system. PCPs and staff provided detailed descriptions of potential barriers. Consistent with previous research on EHRs, participants indicated the EHR was necessary for patient care. PCPs identified concerns with the EHR's usability and functionality.
