For information on starting Autodesk Autocad, see the Windows Autocad Getting Started Guide ([www.autodesk.com](http://www.autodesk.com)). 1. Start Autodesk Autocad and open a drawing or a new drawing. 2. In the Drawing Window, click on the File menu and choose Export Settings. 3. On the Export Settings page, select New User Settings file and click on the Export button. 4. The User Settings file is saved as usersettings.bin. 5. Rename the file to settings.bin and place it on the Desktop. 6. If you received an error message when exporting settings.bin, see the Troubleshooting section. To edit the settings.bin file, start Autodesk Autocad, click on the File menu, and choose Open User Settings. The file will be loaded into Autodesk Autocad as a new user settings file. Change the following fields as necessary to import into an existing drawing: 1. Change Product to your Autodesk Autocad product. 2. The application description is the program name of the Autodesk Autocad component that you are using. If you are using a feature that is not part of the Autodesk Autocad component, the application description is the name of the feature. 3. The application version is the version number of Autodesk Autocad. 4. The application or feature description is the name of the Autodesk Autocad component that you are using. 5. The user ID is the user name you use to log into Autodesk Autocad. 6. The machine ID is the unique identifier of the workstation you are using. 7. The user language is the language that you use to log into Autodesk Autocad. The file settings.bin is saved in the User Settings directory of Autodesk Autocad. This directory is in the Autodesk Autocad program's directory on your hard drive. To check the authenticity of the settings.bin file, start Autodesk Autocad and click on the Help menu. The Settings dialog box will appear. You will see a button to open the settings.bin file, as shown in Figure A.1. Save and close the settings.bin file, and then start Autodesk Autocad. ## What's New In AutoCAD?

We've introduced the new Markup Assist feature which enables you to import Markup Assist version 1.1 into existing drawings (AutoCAD LT, e.g. 2023) and mark up any drawings you import from the web page. Markup Assist can be used to create line, hatch, crosshatch and 2D spline sketches, crosshatch fillups, a pencil sketch and much more. Protection against unwanted behavior: Protect important workspaces from the impact of accidental events. By default, AutoCAD blocks other users from editing protected workspaces. They can only read, create link workspaces and annotate existing links. If an unprivileged user attempts to edit a protected workspace, a message informs them about the protection. Live link icons: Show live link icons in the status bar to indicate which objects are connected to your drawing. You can toggle between linking and un-linking an object by clicking the icon. Linking and un-linking now works the same way in AutoCAD LT and AutoCAD. Markups in AutoCAD: The Markups palette contains all the usual tools (pencil, cross, hatch, line, hatch, crosshatch, filled) and many new tools (Arrow, Cross, Smiley, Frog, Moon, Poem, Comment, Excel, and more). PDF management: Save, create, open and save a PDF document from your drawing. You can convert drawings in PDF format directly into a PDF document for storage, printing or email. Durations in CAD: You can now enter durations in CAD. For example, the duration "1,3" means 1 seconds and 3 seconds. Durations are supported for the print, file, web, email, and print and web options. Protection of geometric dimensions: You can now add and edit dimension tags

when placing or editing components. Shareware: Copy files with AutoCAD without buying a license. What's new in AutoCAD LT 2023: Protection of ArcGIS layers: Protect the data stored in ArcGIS (1.5) layers. ArcGIS layers can no longer be edited by non-GIS users. Advanced tooltips: Display, select, and
