Monday, April 10, 2009 There was a time in my life when I thought being old meant never feeling young again. I didn't know it, but I was actually outliving my own youth. When I was a teenager, one of my favorite things to do was to go to the Tower of London and go on the scary tower ride. It was a wooden tower with a swing in the center. Two of us would be on one swing, and one of us would be on the other swing. It was more than big enough for three of us, but no one ever did that. We would swing so fast that if we let go at the same time, one of us would die. (Actually, it was more like two of us on one swing and one of us on the other swing, but that's splitting hairs.) We learned very quickly, though ff5e5ca8c9

Q: libgdx: Multiple actors in different screens I'm making a game using LibGDX. I'm using actors on my Main class to move my sprites on the screen. If I add more sprites on my main class, it doesn't work. I'll add the main class code: public class GameActivity extends Screen implements InputProcessor { private Stage stage; private Actor actor1; private Actor actor2; private Actor actor3; private Actor actor4; private Actor actor5; private Actor actor6; private Actor actor7; private Actor actor8; private Actor actor9; private Actor actor10; private Actor actor11; public GameActivity(Game game) { //super(game.getName()); stage = new Stage(new StretchViewport(GAME\_WIDTH, GAME\_HE
