Q: Why was Ayano's hand amputated? In the movie BLOOD RUNS BLACK, Ayano was struck by a bottle and ended up having her hand amputated. She even finds a severed hand and puts it inside of a jar of whiskey. What was the purpose of the amputation? Did her hand play any role in the plot? A: That is because the movie producer wanted to show a very realistic scene for the audience. Some viewers might not understand why they would cut off the hand of a female lead, but they want a very realistic ending and that scene fits perfectly. Reference to a critic of the film itself. Subtractive hybridization and cDNA macroarray analysis: a combination for the comprehensive identification of pathogenicity-related genes from *Erysipelothrix rhusiopathiae*. *Erysipelothrix rhusiopathiae* is an important food-poisoning agent of the family of Erysipelotrichaceae. We have recently constructed two subtractive cDNA libraries from the virulent strain E. *rhusiopathiae* XJ-1 and the avirulent strain XJ-12. Subtractive cDNA libraries from E. *rhusiopathiae* XJ-1 and XJ-12 were sequentially generated by the suppression subtractive hybridization (SSH) technique, which enabled us to identify genes that were exclusively expressed in E. *rhusiopathiae* XJ-1. A total of 168 clones were isolated and sequenced from the SSH libraries, and 21 genes were identified that encode proteins with putative functions in E. *rhusiopathiae*. Reverse Northern blot analysis indicated that 16 genes were expressed only in E. *rhusiopathiae* XJ-1 and 5 genes were exclusively expressed in E. *rhusiopathiae* XJ-12. Among the isolated genes, EPRS170 (encoding a protein related to RNA-binding protein of the exosome complex) and EPRS164 (encoding a protein similar to aspartyl-tRNA synthetase) from the E. *rhusiopathiae* XJ-1 subtractive library
