**Super Mario Maker 3ds Mods UPD**

after all, metroid is the series that started it all, and the metroid games are traditionally the biggest of the series. if there was to be a metroid-style maker game, it would have to feature a lot of the traditional mechanics and styles, and metroid: other m is a great place to start from. other than a few cosmetic differences (the inclusion of an older version of samus aran, the space pirates, and the return of the kraid boss), other m would make a good fit for a maker game, as the rest of the content is extremely familiar. but it would be foolish to get stuck with just one game and style. even the earliest parts of the series have had some degree of experimentation, and the link between fusion and metroid prime shows nintendo is open to trying out new mechanics and styles, even if the series isnt quite at the creative peak it once was. if it were to be based on prime, then a prime-style maker game would probably be the most fun and interesting, as it would be a constant learning process to see how new mechanics interact with established ones. thats something metroid never really got into, despite the series' origins, which is probably why the first game isnt remembered as fondly as it should be. but as long as super mario maker is the engine of choice, i think it would be a safe bet to look towards metroid: other m as the best candidate to kickstart a new metroid-style super mario maker. it's certainly proven to be a successful experiment for nintendo, so it could certainly be used as a blueprint for what a metroid-style maker game should be like.

of course, nintendo has never made super mario for the 3ds, but one could easily argue that mario maker was a 3ds game all along. the console's added capabilities, such as the new nintendo 3ds' ability to play game boy, virtual boy, and ds titles, would benefit from more official super mario experiences, and the 3ds has a large, loyal userbase. mario's back, baby! speaking of new super mario bros. u, have you tried the modded versions yet? they're even more amazing than you might think. i've only watched one of the many, many videos of these complex, gorgeous levels and it's absolutely breathtaking. it's like a whole new game. it's the closest i've ever felt to playing the game i grew up with. mario bros. was never my favorite game, but as i played through mario maker i was amazed at the creativity behind these levels. i think i was even more impressed by the mario world levels, especially the ones that put a unique twist on that classic platforming formula. for the most part, nintendo seems to be encouraging and supporting the free-wheeling artistic side of mario maker, but there's a lot of room for improvement. for example, perhaps you could have a mini-game that helps you guess how far up the level is, or maybe a puzzle to solve that you must collect all the coins to reach the next room. if you're looking for a more traditional mario experience with well-designed levels, another popular option is the mario kart series. sure, mario kart wii wasn't exactly a huge success, but the series has evolved into a mario kart tournament-style mode within the past few games that makes them more social and less of a driving game than before. mario kart 8 deluxe is a big improvement, with a robust online mode. as long as nintendo continues to support the series, mario kart will always have a place in the nintendo switch library. 5ec8ef588b
