Thw conky is a windows console is a white_noise utility. This utility displays information in ttyname.con, which can be used to display useful information about the system. You can also customize it using the scripts th wp, however, you might want to turn it off if you are running video intensive applications, such as games. Thw conky is a storable utility. It can be saved in a text file, but I would recommend that you put it in the program folder. Simply open your program folder and save the file as tty.txt. Your tty window should look like the image below. You can also change the color scheme in th wp file, which are the same as the ones for the color scheme window. To uninstall thw conky, go into your thw folder and rename the tty.txt file to thw.txt. Reply SY June 15, 2021 at 12:06 AM Alas! Didn't know the default setup for starting logon screen in case of window7 is tty.txt.

When the user logs off, can only say a big NO when asked to rename tty.txt to thw.txt. With the current version of tty.txt, a new user will have to remove the old tty.txt. Reply Kamlesh Hardik March 17, 2021 at 10:16 AM Yeah agreed, But if you have switched to user mode from real user mode, it will ask you to rename tty.txt to thw.txt. Only way is to do this is through user mode. Reply SY March 18, 2021 at 11:09 PM Every time you log off, the tty.txt gets changed, if it is persistent enough, thw.txt will not be created. To change tty.txt to thw.txt, it is like removing a file after moving it. So your Windows is not starting. Reply Kamlesh Hardik March 18, 2021 at 11:19 PM Again agreed.
