Autodesk Simulation products Autodesk Simulation products are "autonomous solvers for aerospace, mechanical and civil engineering design and manufacturing process optimization problems, and for embedded systems design optimization problems". They are used to determine optimum process settings for the manufacture of industrial parts. For example, the process parameters can be set to maximize fatigue life and minimize the manufacturing cost. Autodesk Simulation products are available as CAD modeling software and for use in an integrated CAD/CAM environment. The Autodesk Simulation products are further supported by an integrated mechanical analysis module for providing strength predictions.
