Assume that f and g are irreducible polynomials of degree ≥ 1 in the ring of polynomials $\mathbb{R}[x]$. Then show that $fg\in\mathbb{R}[x]$ is irreducible. We first show that fg is irreducible. Indeed, assume fg reducible. Then there are non-zero polynomials $p,q\in\mathbb{R}[x]$ such that $p(x)fg(x)+q(x)g(x)=0\}$. We can write $p(x)$ and $q(x)$ as $p(x)=a_m(x)x^m+a_{m-1}(x)x^{m-1}+\cdots+a_0(x)$ and $q(x)=b_n(x)x^n+b_{n-1}(x)x^{n-1}+\cdots+b_0(x)$, where $a_i,b_i\in\mathbb{R}[x]$. Note that a ff5e5ca8c9

There's #PrayFor Thousand Oaks, #GunControlNow, and #GunControl. However, many more threads remain; including those that ask questions like: "What is the best way to prevent mass shootings?" or "Do guns kill more people than they save?" Of course, these questions raise the red flag that gun control is the name of the game. While the outcome of this election will decide whether the US gets gun control in the form of the Great Gun Confiscation, we can start a discussion on how we can make sure people don't end up dead because of guns. That's what this week's Guns Are Bad Binder is about, and it includes links to five gun control articles, four charts, and two videos. India will be the fourth country to land on the Moon after Russia, the United States and China, on its maiden mission to the celestial body Chandrayaan 2, slated to land by August. The lander, which will descend on the Moon’s South Pole on a 7-hour descent, will do the first-ever soft landing of a rover on the lunar surface. The Chandrayaan 2 mission will make India the fourth country after Russia, the United States and China to successfully land on the Moon. The mission will further enhance India’s space technology and scientific know-how, ISRO said. The Indian Space Research Organisation (ISRO)’s chairman K Sivan said the mission would be a success. “I am confident about the success of Chandrayaan 2. It is a very complex mission and requires a lot of patience. The spacecraft will be in orbit around the Moon for at least a year and finally,
