investigated as a function of contact time, pH, and initial fluoride concentration. The sorption process was found to be rapid; equilibrium was attained in less than 24h. The sorption of fluoride by the magnesium calcium fluoride was faster at lower

pH values. The sorption of fluoride by magnesium calcium fluoride was found to be independent of initial fluoride concentration. The sorption was higher than that reported for activated carbon and other sorbents.Nextel to Make Visions Handheld Software

With Markup Import, you can quickly generate a number of printable sheets or press releases and

import them directly into your AutoCAD drawings. Drawings with these printable sheets are ready to print or to edit with Markup Assist. These are printed sheets that contain diagrams, data, or checklists. Markup Assist can quickly edit drawings

and make them look professional with high-end features. With this update, AutoCAD for Mac and Windows can work together more easily, even if you work on two different computers. New: Multiple Zones of Material: In AutoCAD, every object has

a visible area and a hidden area. The visible area is the part of the drawing you can see through it. The hidden area is the part of the drawing that is invisible and cannot be modified. AutoCAD 2023 lets you view and edit the hidden parts of a drawing in a

separate drawing window. Now you can access the hidden areas of your drawing and create new visible areas in the same drawing without having to open a second drawing. Shared Workbook: This new feature for AutoCAD lets you publish a separate

drawing as a workbook. When you use the Shared Workbook feature, you share a drawing as a workbook. A shared workbook works like a normal drawing: it has its own drawing history and undo. But, with a shared workbook, all users have

access to the same workbook drawing. You can share a workbook on one computer and work with it on any other computer. You can share a workbook on your computer and save it to a server, and access it at any other time. Time Zones: AutoCAD gives you more

control over the time of day when you create drawings. Drawings created during times that you don't want to work on your designs, such as midnight or early in the morning, will now be created in the system time zone, which you specify on your computer's clock. For

example, if you start your computer at 10:00 a.m. in Toronto, Canada, you can specify the system time zone as Toronto. If you specify New York, you will be prompted to use the New York time zone. New custom tool for saved content: AutoCAD saves the

content of a drawing to a separate file. For example, you might make a copy
